Here are some common Java interview questions along with sample answers.

What is Java? Java is a high level object oriented programming language developed by Sun Microsystems, now owned by Oracle. It is designed to be platform independent, allowing developers to write code once and run it on any Java enabled platform without recompilation.

What are the main features of Java? Some of the main features of Java include:

- Platform independence: Java programs can run on any platform with a Java Virtual Machine (JVM).
- Object oriented: Java supports object oriented programming principles such as encapsulation, inheritance, and polymorphism.
- Robustness: Java provides strong memory management, exception handling, and type checking mechanisms to ensure robust and reliable code.
- Multi threading: Java supports concurrent execution of multiple threads, allowing developers to write scalable and responsive applications.
- Portability: Java programs are portable across different platforms, making them suitable for developing cross platform applications.

What is the difference between JDK, JRE, and JVM?

- JDK (Java Development Kit)**: is a software development kit that includes tools for developing and compiling Java applications, such as the Java compiler (javac) and the Java runtime environment (JRE).
- JRE (Java Runtime Environment)**: is a runtime environment that provides the necessary libraries and components to run Java applications. It includes the JVM (Java Virtual Machine) and core Java libraries.
- JVM (Java Virtual Machine)**: is an abstract computing machine that provides an execution environment for Java bytecode. It interprets and executes Java bytecode instructions and manages memory, threads, and other runtime aspects of Java applications.

What is the difference between abstract class and interface in Java?

- An **abstract class** is a class that cannot be instantiated and may contain abstract methods (methods without a body) as well as concrete methods. It can also contain instance variables and constructors. Subclasses of an abstract class must implement all abstract methods or be declared abstract themselves.
- An **interface** is a reference type in Java that defines a contract of methods that a class must implement. It can only contain constant variables and method signatures without method bodies. A class can implement multiple interfaces but can only extend one abstract class.

What is the difference between ArrayList and LinkedList in Java?

- ArrayList** is implemented as a dynamic array, meaning that it stores elements in a contiguous memory location and supports random access to elements using an index. It is efficient for accessing elements by index but less efficient for inserting or removing elements from the middle of the list.
- LinkedList** is implemented as a doubly linked list, meaning that it stores elements as nodes with references to both the previous and next nodes. It is efficient for inserting or removing elements from the middle of the list but less efficient for random access.

These are just a few examples of Java interview questions. Depending on the role and level of the

interview questions may cover more advanced topics such as design patterns concurrency memory management and performance optimization It s important to thoroughly prepare for interviews by reviewing core Java concepts practicing coding exercises and gaining hands on experience with Java programming [Archives of Pathology & Laboratory Medicine](#) ,2004 **JAVA Developer's Journal** ,1996 [Java Report](#) ,1997 [The Science Teacher](#) ,2009 **The Engineer** ,1882
