Percolation Theory for Flow in Porous Media Allen Hunt,Robert Ewing,2009-05-05 Why would we wish to start a 2nd edition of Percolation theory for flow in porous media only two years after the first one was finished There are essentially three reasons 1 Reviews in the soil physics community have pointed out that the introductory material on percolation theory could have been more accessible Our additional experience in teaching this material led us to believe that we could improve this aspect of the book In the context of rewriting the first chapter however we also expanded the discussion of Bethe lattices and their relevance for classical exponents of percolation theory thus giving more of a basis for the discussion of the relevance of hyperscaling This addition though it will not tend to make the book more accessible to hydrologists was useful in making it a more complete reference and these sections have been marked as being possible to omit in a first reading It also forced a division of the first chapter into two We hope that physicists without a background in percolation theory will now also find the introductory material somewhat more satisfactory 2 We have done considerable further work on problems of electrical conductivity thermal conductivity and electromechanical coupling [A Critical Path Analysis of Perceptual Processes](#) David William Bauer,1981 **An Introduction to Critical Path Analysis** K.
