Gaming AI George Gilder, 2020-10-15 Pointing to the triumph of artificial intelligence over unaided humans in everything from games such as chess and Go to vital tasks such as protein folding and securities trading many experts uphold the theory of a singularity This is the trigger point when human history ends and artificial intelligence prevails in an exponential cascade of self replicating machines rocketing toward godlike supremacy in the universe Gaming AI suggests that this belief is both dumb and self defeating Displaying a profound and crippling case of professional amnesia the computer science establishment shows an ignorance of the most important findings of its own science from Kurt G del s incompleteness to Alan Turing s oracle to

Claude Shannon's entropy Dabbling in quantum machines these believers in machine transcendence defy the deepest findings of quantum theory Claiming to create minds they are clinically out of their minds Despite the quasi religious pretensions of techno elites nobly saving the planet from their own devices their faith in a techno utopian singularity is a serious threat to real progress An industry utterly dependent on human minds will not prosper by obsoleting both their customers and their creators Gaming AI calls for a remedial immersion in the industry's own heroic history and an understanding of the actual science of their own human minds

Artificial Intelligence for Computer Games Pedro Antonio González-Calero, Marco Antonio Gómez-Martín, 2011-03-01 The book presents some of the most relevant results from academia in the area of Artificial Intelligence for games It emphasizes well theoretically supported work supported by developed prototypes which should lead into integration of academic AI techniques into current electronic entertainment games The book elaborates on the main results produced in Academia within the last 10 years regarding all aspects of Artificial Intelligence for games including pathfinding decision making and learning A general theme of the book is the coverage of techniques for facilitating the construction of flexible not prescribed AI for agents in games Regarding pathfinding the book includes new techniques for implementing real time search methods that improve the results obtained through AI as well as techniques for learning pathfinding behavior by observing actual players Regarding decision making the book describes new techniques for authoring tools that facilitate the construction by game designers typically nonprogrammers of behavior controlling software by reusing patterns or actual cases of past behavior Additionally the book will cover a number of approaches proposed for extending the essentially pre scripted nature of current commercial videogames AI into a more interactive form of narrative where the story emerges from the interaction with the player Some of those approaches rely on a layered architecture for the character AI including beliefs intentions and emotions taking ideas from research on agent systems The book also includes chapters on techniques for automatically or semiautomatically learning complex behavior from recorded traces of human or automatic players using different combinations of reinforcement learning case based reasoning neural networks and genetic algorithms
