Infrastructure and Technology Management Tugrul U. Daim, Leong Chan, Judith Estep, 2018-01-10 This book presents emerging technology management approaches and applied cases from leading infrastructure sectors such as energy healthcare transportation and education Featuring timely topics such as fracking technology electric cars Google s eco friendly mobile technology and Amazon Prime Air the volume s contributions explore the current management challenges that have resulted from the development of new technologies and present tools applications and frameworks that can be utilized to overcome these challenges Emerging technologies make us rethink how our infrastructure will look in the future Solar and wind generation for example have already changed the dynamics of the power sector While they have helped to reduce the use of fossil fuels they have created management complications due to their intermittent natures Meanwhile information technologies have changed how we manage healthcare making it safer and more accessible but not without implications for cost and administration Autonomous cars are around the corner On line education is no longer a myth but still a largely unfulfilled opportunity Digitization of car ownership is achievable thanks to emerging business models leveraging new communication technologies The major challenge is how to evaluate the relative costs and benefits of these technologies This book offers insights from both researchers and industry practitioners to address this challenge and anticipate the impact of new technologies on infrastructure now and in the future

Affective and Pleasurable Design
Shuichi Fukuda, 2023-07-19 Proceedings of the 14th International Conference on Applied Human Factors and Ergonomics AHFE 2023 July 20 24 2023 San Francisco USA

The Log ,1940-10 Antennas Boris Levin, 2024-12-26 This book describes both known and new results In the sections devoted to the use of integral equations for the current in a linear metal radiator the focus is on Leontovich s equation An advantage of this equation is the simplicity of the solution and the absence of the argument in it because the integration over already performed The refined solution makes it possible to determine the total sum of the series for the current which is close to the known solution including only the first terms The results of the synthesis of different types of antennas with capacitive loads are presented which makes it possible to implement Hallen s hypothesis about the usefulness of applying such loads to create an in phase current distribution in antennas and to obtain required characteristics New results include the widespread use of the complex potential method in relation to the calculation of capacitive structures in homogeneous and inhomogeneous media antenna patterns and flows of electrical fields between antenna elements and in the surrounding space In particular the analysis of field flows makes it possible to substantiate a rigorous method for analyzing microstrip antennas The characteristics of antennas in various conditions of their installation are considered and compared The results of the use of multi floors structures that provide in the wide frequency range the radiation in direction perpendicular to the antenna axis and structures that make it possible to reduce the mutual influence of antennas located at different heights on a common mast are described
