Explain implicit wait and explicit wait in Selenium
Implicit Wait Implicit wait instructs the WebDriver to wait for a certain amount of time before throwing an exception when attempting to locate an element It is applied globally to all elements and waits for a fixed amount of time
Explicit Wait Explicit wait is used to wait for a specific condition to occur before proceeding with the next steps in the test It is applied to a specific element and waits until the condition is met or a timeout occurs
What is Page Object Model POM in Selenium
Page Object Model POM is a design pattern used in Selenium for creating an object oriented representation of web pages and their elements It separates the test logic from the page structure making the tests more maintainable and reusable
