Hands-on Serverless Architecture with AWS Lambda Alan Rodrigues, 2018

Serverless architecture is a way to build and run applications and services without having to manage infrastructure. Lambda eliminates the problem of dealing with cloud based servers at all levels of technology stack and offers a pay per request billing model where you don't have to pay for idle computing time. Thus it becomes extremely important to understand the serverless architecture which will help you build, manage and secure serverless applications with AWS Lambda. In this course you'll learn to build code and deploy it without ever needing to configure or manage underlying servers. You'll build secure and manage serverless architectures that can power the most demanding web and mobile apps. You won't have to provision infrastructures or worry about scale. By the end of this course you will know how to design and implement production ready AWS serverless solutions. You'll be able to architect and build your own serverless applications on AWS.
