Laurence Lars Svekis, 2026-01-27 100 JavaScript Games Projects is a hands on project driven guide for learning modern JavaScript by building real systems instead of memorizing syntax This book takes a fundamentally different approach to learning JavaScript Rather than focusing on isolated concepts or short code snippets it walks you through 100 complete working JavaScript games and projects each designed to teach how real software systems are built structured and maintained Every project runs directly in the browser using modern vanilla JavaScript HTML and CSS No frameworks are required This ensures you understand exactly how JavaScript works under the hood and how real applications function before introducing abstractions The goal of this book is not to teach you how to copy code The goal is to teach you how to think like a JavaScript developer

What You Will Learn By building 100 progressively structured projects you will learn how to Design state driven applications that stay predictable and easy to debug Build game loops schedulers and time based systems Implement validation rules decision logic and progression systems Separate input handling business logic and rendering cleanly Create interactive user interfaces without relying on frameworks Debug performance using profiling and visualization techniques Structure scalable JavaScript code using clear architectural patterns Convert games into real world applications and portfolio projects Each project focuses on systems not gimmicks Games are used because they make logic visible interactive and impossible to fake

From Games to Real Applications The projects in this book are intentionally designed to map directly to real software problems Scoring systems become validation engines Game rules become business logic Timers become schedulers and background jobs Levels become workflows Animations become UI state transitions

Dedicated appendices show you how to convert the games into practical applications such as dashboards workflow tools editors validation systems schedulers and internal business tools You will also find reusable JavaScript code patterns that can be lifted directly from the projects and applied to real applications

The final chapter Game 101 is a full capstone project that integrates everything you have learned into a complete modular JavaScript system that mirrors how professional applications are built

Full Source Code and Live Demos Included All 100 projects plus the Game 101 capstone are included as runnable source code The complete source code repository is available on GitHub and live versions of every project are hosted online so you can play inspect and modify the code directly in your browser You are encouraged to experiment break things rebuild systems and make the projects your own
