Sports Analytics Leonard C Maclean, William T Ziemba, 2021-12-22 This book is a collection of applications of analytic techniques to a number of popular sports including baseball basketball hockey Jai Alai NFL football and horseracing We focus on both the statistics of the sporting events and betting strategies on the events The subject is fascinating as there are many twists and subtle complicated decisions Sports analytics applies mathematical and statistical methods to important questions in the structure and performance of sporting activities using the same basic methods and approaches as data analysts in other disciplines Sports games and events are a fruitful area for study and to evaluate betting strategies as there is extensive data and mean reversion With prices changing continuously risk arbitrage bets can be made Moreover little errors like a penalty to a player or an error in a call by a referee can change the score of a game and corresponding betting prices The collection and analysis of in game data can inform players coaches and staff on effective decision making during sporting events Novel features of the book include an analysis of who were the greatest baseball batters analyses of the players most important to team success and they are not necessarily the best players in basketball NFL football and hockey a tutorial on risk arbitrage and its applications to NFL football and NBA basketball a discussion of many ad hoc decision rules by coaches and players and what was really optimal in the racing section we discuss breeding the analysis of various bets like the Rainbow and ordinary Pick 6 a discussion and betting on the most important races and a visit to the Breeders Cup with Ed Thorp to demonstrate the place and show system in action

Prediction, Projection and Forecasting Thomas L. Saaty, Luis G. Vargas, 1991 We predict when we say in advance foretell or prophesy what is likely to happen in the future We project when we calculate the numerical value associated with a future event We forecast a special kind of prediction on data of past happenings to generate or cast data for future by relying happenings Generally one predicts yes no a war an earthquake or the outcome of a chess match projects the value of the GNP or of unemployment and forecasts the weather and more scientifically the economic trends Prediction projection and forecasting must be constrained in time and space when and where Often the accuracy of a forecast is of interest along with how sensitive the outcome is to

changes in the factors involved Is there a basis for improving the wisdom we need to make correct and useful predictions We believe there is and that it can be cultivated by studying the approach given here along with the various examples To the best of our knowledge no other work has approached prediction in the scientific framework of hierarchies Prediction is the synthesis of past and present in an attempt to foretell the future In our view creation is not the ultimate phenomenon of the world Nature creates forms and so do we The problem is to surmise the eventual purpose impact and use of creation It is the synthesis or outcome of bringing together the results of creation that we need to predict
