GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN

Hands-On GPU Computing with Python Avimanyu Bandyopadhyay, 2019-05-14 Explore GPU enabled programmable environment for machine learning scientific applications and gaming using PuCUDA PyOpenGL and Anaconda Accelerate Key Features Understand effective synchronization strategies for faster processing using GPUs Write parallel processing scripts with PyCuda and PyOpenCL Learn to use the CUDA libraries like CuDNN for deep learning on GPUs Book Description GPUs are proving to be excellent general purpose parallel computing solutions for high performance tasks such as deep learning and scientific computing This book will be your guide to getting started with GPU computing It will start with introducing GPU computing and explain the architecture and programming models for GPUs You will learn by example how to perform GPU programming with Python and you ll look at using integrations such as PyCUDA PyOpenCL CuPy and Numba with Anaconda for various tasks such as machine learning and data mining Going further you will get to grips with GPU work flows management and deployment using modern containerization solutions Toward the end of the book you will get familiar with the principles of distributed computing for training machine learning models and enhancing efficiency and performance By the end of this book you will be able to set up a GPU ecosystem for running complex applications and data models that demand great processing capabilities and be able to efficiently manage memory to compute your application effectively and quickly What you will learn Utilize Python libraries and frameworks for GPU acceleration Set up a GPU enabled programmable

machine learning environment on your system with AnacondaDeploy your machine learning system on cloud containers with illustrated examplesExplore PyCUDA and PyOpenCL and compare them with platforms such as CUDA OpenCL and ROCm Perform data mining tasks with machine learning models on GPUsExtend your knowledge of GPU computing in scientific applicationsWho this book is for Data Scientist Machine Learning enthusiasts and professionals who wants to get started with GPU computation and perform the complex tasks with low latency Intermediate knowledge of Python programming is assumed

IBM Power System S822LC for Big Data: Technical Overview and Introduction Scott Vetter,David Barron,Alexandre Bicas Caldeira,Volker Haug,IBM Redbooks,2017-08-29 This IBM Redpaper™ publication is a comprehensive guide that covers the IBM Power System S822LC for Big Data 8001 22C server that uses the latest IBM POWER8 processor technology and supports Linux operating systems OSs The objective of this paper is to introduce the Power S822LC for Big Data offerings and their relevant functions as related to targeted application workloads The new Linux scale out systems provide differentiated performance scalability and low acquisition cost including Consolidated server footprint with up to 66% more virtual machines VMs per server than competitive x86 servers Superior data throughput and performance for high value Linux workloads such as big data analytic and industry applications Up to 12 LFF drives that are installed within the chassis to meet storage rich application requirements Superior application performance due to a 2x per core performance advantage over x86 based systems Leadership data through put enabled by POWER8 multithreading with up to 4x more threads than x86 designs Acceleration of bid data workloads with up to two GPUs and superior I O bandwidth with Coherent Accelerator Processor Interface CAPI This publication is for professionals who want to acquire a better understanding of IBM Power Systems™ products The intended audience includes Clients Sales and marketing professionals Technical support professionals IBM Business Partners Independent software vendors

Cloud Computing for Machine Learning and Cognitive Applications Kai Hwang,2017-07-07 The first textbook to teach students how to build data analytic solutions on large data sets using cloud based technologies This is the first textbook to teach students how to build data analytic solutions on large data sets specifically in Internet of Things applications using cloud based technologies for data storage transmission and mashup and AI techniques to analyze this data This textbook is designed to train college students to master modern cloud computing systems in operating principles architecture design machine learning algorithms programming models and software tools for big data mining analytics and cognitive applications The book will be suitable for use in one semester computer science or electrical engineering courses on cloud computing machine learning cloud programming cognitive computing or big data science The book will also be very useful as a reference for professionals who want to work in cloud computing and data science Cloud and Cognitive Computing begins with two introductory chapters on fundamentals of cloud computing data science and adaptive computing that lay the foundation for the rest of the book Subsequent chapters cover topics including cloud architecture mashup services virtual machines Docker containers mobile

clouds IoT and AI inter cloud mashups and cloud performance and benchmarks with a focus on Google's Brain Project DeepMind and X Lab programs IBM Kai Hwang's Synapse Bluemix programs cognitive initiatives and neurocomputers The book then covers machine learning algorithms and cloud programming software tools and application development applying the tools in machine learning social media deep learning and cognitive applications All cloud systems are illustrated with big data and cognitive application examples

Advanced Data Mining and Applications Changjie Tang, 2008-09-29 This book constitutes the refereed proceedings of the 4th International Conference on Advanced Data Mining and Applications ADMA 2008 held in Chengdu China in October 2008 The 35 revised full papers and 43 revised short papers presented together with the abstract of 2 keynote lectures were carefully reviewed and selected from 304 submissions The papers focus on advancements in data mining and peculiarities and challenges of real world applications using data mining and feature original research results in data mining spanning applications algorithms software and systems and different applied disciplines with potential in data mining

Innovation Management Jin Chen, Gang Zheng, 2019-03-22 The key for lasting competitive advantage lies in embracing innovation as a core value and managing it effectively Innovation Management provides a comprehensive overview of innovation theory and a framework for implementation intended for business school students of Innovation Management managers and practitioners alike In this new text authors Jin Chen and Gang Zheng examine innovation from the perspectives of strategy internal processes resource management and organizational culture Numerous case studies illustrating both successes and failures in innovation include Tesla P G Apple Uber Google NVIDIA Haier Group Motorola and Nokia Starting from a systematic introduction to the types process and models of innovation the authors present a strategical management framework that includes models for indigenous innovation total innovation open innovation and holistic innovation They outline the key roles played by management of capital information and knowledge systems human resources and IP rights Organizational systems that are designed to stimulate innovation within the corporation are detailed and finally the authors examine the future of innovation management focusing the need for sustainable innovation that recognized the importance of environmental and ecological concerns

A Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke, 2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been

made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis
