Abstract. *This paper describes the architecture, system analysis and implementation of world-wide regulation compliant UHF RFID reader transceiver for ISO 18000-6 multi-class tags in the ISM band 860 MHz–960 MHz. The presented considerations are based on a system analysis providing evaluation of the transceiver's building blocks parameters in accordance with the required characteristics of a complete RFID reader system, read range, data transmission rate, reading speed and power consumption. The Phase Noise, Noise Figure, Sensitivity, P1dB, Dynamic Range are estimated for the design of a custom 'system-in-package' transceiver, implemented in LTCC-module. Based on the direct-conversion architecture, the reader transceiver integrates RF-blocks, frequency synthesizer, modulation and demodulation functions, low frequency analog baseband. The receiver sensitivity is down to -85 dBm, the transmitter produces output power of +17 dBm.*

1. INTRODUCTION

Radio-Frequency Identification (RFID) UHF band supporting the EPC global Class 1 Generation 2 and ISO 18000-6A/B/C standards have become indispensable in today's distribution industries, purchasing, manufacturing, energy and healthcare services [1]. A UHF RFID system consists of reader(s), tags, and host computer.

A UHF reader is a system with an integrated transceiver module as a core. As shown in Fig.1, RFID reader transceiver consists of a UHF receiver and transmitter front-ends, frequency synthesizer, low frequency analog baseband, analog-to-digital (ADC) and digital-to-analog (DAC) converters, and digital baseband for data processing and control [2], [3]. The UHF front-end of a RFID reader transceiver contains a low noise amplifier (LNA), power amplifier (PA) (required for improving sensitivity of receiver path and output power level in forward link), quadrature RF modulator and demodulator. The low frequency analog baseband of a RFID reader transceiver contains an active bandpass

a detailed description of RFID and itOCOs operation along with a fundamental overview of sensors and wireless sensor networks Moreover this practical reference gives you step by step guidance on how to design RFID enabled sensors that form a wireless sensor network You also find detailed coverage of state of OCothe art RFID sensor technology and worldwide applications **Radio Frequency Identification and Sensors** Etienne Perret,2014-12-04 This book deals with the field of identification and sensors more precisely the possibility of collecting information remotely with RF waves RFID The book introduces the technology of chipless RFID starting from classical RFID and barcode and explores the field of identification and sensors without wire without batteries without chip and with tags that can even be printed on paper A technique for automatic design of UHF RFID tags is presented aiming at making the tags as insensitive as possible to the environment with the ability to increase the reading range reliability or conversely making them sensitive in order to produce sensors meanwhile keeping their unique ID The RFID advantages are discussed along with its numerous features and comparisons with the barcode technology are presented After that the new chipless RFID technology is introduced on the basis of the previous conclusions Original technological approaches are introduced and discussed in order to demonstrate the practical and economic potential of the chipless technology **Design and Optimization of Passive UHF RFID Systems** Jari-Pascal Curty,Michel Declercq,Catherine Dehollain,Norbert Joehl,2006-12-18 Radio Frequency IDentification RFID is an automatic identification method relying on storing and remotely retrieving data using devices called RFID tags or transponders An RFID tag is a small object that can be attached to or incorporated into a product animal or person An RFID tag contains an antenna to enable it to receive and respond to Radio Frequency RF queries from an RFID reader or interrogator Passive tags require no internal power source whereas active tags require a power source As of today 2006 the concepts of ubiquitous computing and ambient intelligence are becoming widespread In order for these to become a reality a number of key technologies are required In brief these technologies need to be sensitive responsive interconnected contextualised transparent and intelligent RFID and in particular passive RFID tags are such a technology In order to deliver the necessary characteristics that could lead to ambient intelligence however there are some challenges that need to be addressed Remote powering of the tags is probably the most important challenge Issues concerning the antenna tag interface and the rectifier design that allow the RF signal to be converted to Direct Current DC are top priorities Secondly the communication link and the reader should be optimized The RF signal that contains the tag data suffers from a power of four decay with the distance between tag and reader As a result both the reader sensitivity and the tag backscattered power efficiency have to be maximized Long range powering as well as sufficient communication quality are the guidelines of this work This work proposes a linear two port model for an N stage modified Greinacher full wave rectifier It predicts the overall conversion efficiency at low power levels where the diodes are operating near their threshold voltage The output electrical behavior of the rectifier is calculated as a function of the received power and the antenna parameters Moreover the two port

parameter values are computed for particular input voltages and output currents for the complete N stage rectifier circuit using only the measured I V and C V characteristics of a single diode Also presented in this work is an experimental procedure to measure how the impedance modulation at the tag side affects the signal at the reader The method allows the tag designer to efficiently predict the effect of a modulator design at the system level and gives a useful instrument to choose the most appropriate impedances Finally the design of a fully integrated remotely powered and addressable RFID tag working at 2 45GHz is described The achieved operating range at a 4W Effective Isotropically Radiated Power EIRP reader transmit power is at most 12 m The Integrated Circuit IC is implemented in a 0 5 um silicon on sapphire technology A state of the art rectifier design is embedded to supply energy to the transponder Inductive matching and a folded dipole antenna are key elements for achieving this performance **High Performance UHF RFID Reader Baseband Design** Feng Ge,2010

central to the augmented RFID system To show the suitability of such an approach the performance of the implementation was compared to the other two outlined solutions A comparison of the read rate and range of the implementations were the defining factors The analysis showed that the ARR is capable of receiving tag signals with a read rate of 50% for passive and 66% for semi passive tags at a one meter distance and is capable of receiving tag signals at a maximum of 3 25 meters for passive and 5 5 meters for semi passive tags with the reader being within 8 meters of the ARR Two applications were implemented to showcase the ARR an RFID portal and protocol analyzer **Chipless RFID Reader Design for Ultra-Wideband Technology** Marco Garbati,Etienne Perret,Romain Siragusa,2018-06-25 Chipless RFID Reader Design for Ultra Wideband Technology Design Realization and Characterization deals with the efficient design of Field Programmable Gate Array FPGA based embedded systems for chipless readers providing a reading technique based on polarization diversity that is shown with the aim of reading cross polarized chipless tags independently from their orientation This approach is valuable because it does not give any constraint at the tag design level This book presents the state of the art of chipless RFID systems also providing useful comparisons The international regulations that limit the UWB emission are taken into consideration along with design guidance Two designed realized and characterized reader prototypes are proposed Sampling noise reduction reading time and cost effectiveness are also introduced and taken into consideration Presents the design realization and characterization of chipless RFID readers Provides concepts that are designed around a FPGA and its internal architecture along with the phase of optimization Covers the design of a novel pulse generator *Optimal Placement for RFID Reader Antennas* Laura Hervert Escobar,2014 Currently RFID system design in industry is typically based on a trial and error approach or on simulations and testing of selected components of the RFID system A significant need in RFID research is to bridge the gap between practitioners and researchers This research focuses on the problem of deployment of RFID reader antennas for identifying items In this way an optimization model is proposed in order to minimize the total quantity of reader antennas required to identify all tags in a given area The testing of the model was performed using several types of generated instances based on a passive UHF RFID system Instances gradually increase their complexity by adding factors considered by practitioners and researchers such as the orientation of the tags the reflection coefficient of the material to be identified and interference from obstacles in the area In order to obtain faster solution times a second model is proposed using the set covering problem SCP formulation However both models have been shown to be NP complete In this way the time required to solve the problem increases very quickly as the size of the problem grows The greedy randomized adaptive search procedure GRASP heuristic is proposed to overcome this difficulty Stopping rules were applied for each method of solution The two optimization models and the heuristics are compared by instance Results are shown in two parameters the readers required to identify all the tags and the time of solution descripci n del autor **Development and Implementation of RFID Technology** Cristina Turcu,2009-01-01 The book generously covers a wide range of aspects and
