As every astronomer knows, astronomy is one of the most approachable and inspiring of the natural sciences. It appeals to both children and adults, while drawing in curious minds with its immense distances and unimaginably powerful natural phenomena. In this book, you will find out how to be a part of the journey in sharing scientific knowledge and inspiring minds of all ages. By using the affordable tools and techniques provided in this book, you will learn about how astronomers can easily engage people with views of our solar system's planets, moons, and even more distant objects like nebulae, stellar nurseries, and remnants of exploded stars. Perhaps most importantly, the natural appeal of this science is helpful when explaining to non-scientists how science works. What is science and scientific methodology? How is it used to give mankind knowledge and solutions to problems that we face in many scientific fields, including medicine? How does it differ from other sources of information? This book, sprinkled with the author's 24 plus years of personal experience in public outreach, offers practical techniques to engage, educate, and inspire all who are
