- **Introduction**

The goal of this system is to provide a location-based alarm system through which customers can broadcast their last known position in emergency situations. Imagine that you are hiking in the forest alone and don't know how to get back to your car, or you get lost driving to your friend's home. At times like these, how can you ask for help? With the push of a single button or pull off the hands-free cord on this system, it will notify your friends with your latest locations immediately.

- **Positioning**

Mobile positioning determines the user's actual location information by mobile terminals and mobile networks, such as text messages or mobile signals to a complete a series of location information services. The mobile positioning method can be broadly classified into three types:

- ✓ **Positioning based on triangulation:** This approach is most widely used in mobile positioning technology. It uses the geometric calculation of the triangular relationship to measure the target object's location. This measurement of positioning technology needs to know three reference point locations and the distances from those reference point locations to the target object. Then using triangular knowledge, it can detect the target object's position.
- ✓ **Positioning based on environment analysis:** This approach uses the characteristics of the environment surrounding the target object to measure its location. It detects the target object's location by comparing the characteristics of the surrounding environment to existing characteristics which have been stored in a database.
- ✓ **Positioning based on relationship:** This approach uses the relationship of the target object and one or more existing objects to measure the target object's location. It needs an identification system to identify each unique existing object such as the id of each cell tower.

- **Track Position**

The mobile phone may receive cell signal or Wi-Fi signal from different cell towers or access points. Therefore we would apply the triangulation theory in our solution to calculate approximate location. However, it cannot work so precisely as GPS. The figure below shows the triangulation theory in the cell phone.

*Security Modeling and Analysis of Mobile Agent Systems* Lu Ma, Jeffrey J.-P. Tsai, 2006 A mobile agent system could be attacked by malicious agents platforms and third parties Mobile agents simply offer greater opportunities for abuse and misuse which broadens the scale of threats significantly In addition since mobile agents have some unique characteristics such as their mobility security problems have become more complicated in these systems These security problems have become a bottleneck in the development and maintenance of mobile agent systems especially in security sensitive applications such as electronic commerce This book introduces the concept and structure of mobile agent systems and discusses various attacks and countermeasures The emphasis is on the formal modeling and analysis of secure mobile agent systems and their applications Sample Chapter s Chapter 1 Introduction 97 KB Contents Mobile Agent System Attacks and Countermeasures of Software System Security Security Issues in a Mobile Agent System A New Formal Model OCo Extended Elementary Object System EEOS A Formal Framework of a Generic Secure Mobile Agent System Based on EEOS Translating the EEOS Model to Colored Petri Net Model Simulation and Analysis of the Extended Elementary Object System Model of a Secure Mobile Agent System A Case Study in Electronic Commerce A Case Study in E Auction System Readership Computer scientists researchers software engineers programmers and graduate students in software engineering networking and automated systems Seventh IEE European Conference on Mobile and Personal Communications, 13-15 December 1993, Venue, Brighton Centre, Brighton, UK ,1993 Internet and Distributed Computing Systems Mukaddim Pathan, Guiyi Wei, Giancarlo Fortino, 2013-10-22 This book constitutes the refereed proceedings of the 6th International Conference on Internet and Distributed Computing Systems IDCS 2013 held in Hangzhou China in October 2013 The 20 revised full papers and 13 invited papers presented were carefully reviewed and selected from numerous submissions The papers cover the following topics ad hoc and sensor networks internet and Web technologies network operations and management information infrastructure resilience as well as fault tolerance and availability *Advances in Information Security Management & Small Systems Security* Jan H.P.
