Chapter 4: Single-Table Queries

Solutions

Answers to Review Questions

1. The basic form of the SELECT command is SELECT-FROM. Specify the columns to be listed after the word SELECT (or type * to select all columns), and then specify the table name that contains these columns after the word FROM. Optionally, you can include conditions after the word WHERE.
2. Simple conditions are written in the form: column name, comparison operator, column name or value. Simple conditions can involve any of the comparison operators: =, >, >=, <, <=, or < > or != (not equal to).
3. You can form compound conditions by combining simple conditions, using the operators AND, OR, or NOT.
4. Use the BETWEEN operator.
