

## A THEORY OF MUSICAL GENRES: TWO APPLICATIONS

**Franco Fabbri**

*This paper, delivered at the First International Conference on Popular Music Studies (Amsterdam, 1981), was originally printed in Popular Music Perspectives (ed. D. Horn and P. Tagg; 1982, Göteborg and Exeter: International Association for the Study of Popular Music, p. 52-87). Page turns in the original are marked between braces, e.g. "[52-53]" as the boundary between pages 52 and 53. Please note that Fabbri has considerably expanded the ideas presented below in his book *Il suono in cui viviamo* (1996, Milan: Feltrinelli) under the headings "Che genere di musica?" (p. 7-32) and "I generi musicali e i loro metallinguaggi" (p. 33-41).*

### Structure of this study

This study is divided into three parts. In the first part a definition of "musical genre" is stated and commented on: from this basis observations and examples are made about the types of rules that contribute to the definition of a genre and on the ways in which they are accepted by various communities. In the second part an analysis is made of the genres characterized by the *canzone* form in Italy today, in the wider meaning intended with *canzone*. This synchronic analysis is aimed at explaining the structure of a substantial part of the present Italian musical system, and at illustrating the possible distinguishing lines between similar genres usually confused under the common heading of "light music". In the third part, one of these genres, the *canzone d'autore*, is analysed in its course through time; this diachronic analysis is aimed at the investigation of the ways by which a genre becomes codified, and its possible transformations.

#### 1.1. Definition

A musical genre is "a set of musical events (real or possible) whose course is governed by a definite set of socially accepted rules".

The notion of set, both for a genre and for its defining apparatus, means that we can speak of sub-sets like "sub-genres", and of all the operations foreseen by the theory of sets: in particular a certain "musical event" may be situated in the intersection of two or more genres, and therefore belong to each of these at the same time.

For "musical event", the definition of "music" given by the Italian semiologist Stefani may be considered valid: "any type of activity performed around any type of event involving sound". This definition is controversial, but that which has made it so is exactly what we need in this case, that is the fact that it is, if anything, too broad. This means that those who are not in agreement can refer to a set of rules that define a more restricted set, but they cannot prevent a community, small and discredited though it may be, from considering a "musical event" that which they, the objectors, do not consider music at all.

Excessive broadness is a defect also of my own definition of genre: it allows me {52-53} to call "genre" any set of genres, and therefore some which usually go under other names: musical systems, ethnic music, even "terrestrial music" [a union of all the types of musical production and consumption on this planet] or "galactic".

The only solution I have found to this problem is to decide each time whether a certain set of musical events is being considered in relation to other opposing sets in which case I will call it a genre - or in relation to its sub-sets - in which case I will call it a system. In any case this defect is preferable to the opposite risk, that is, not recognizing as a genre something which is considered as such by millions of people.

Reference to the reality or possibility of musical events may appear redundant too: it does not refer only to the peculiar characteristic of a genre to collect exist-ant works and at the same time invite the composing of future works, but, for example, to the question of whether a score is a "real" or a "virtual" work - a question which I believe implicit, with the
