The University of Google Tara Brabazon, 2016-02-17 Looking at schools and universities it is difficult to pinpoint when education teaching and learning started to hemorrhage purpose aspiration and function Libraries and librarians have been starved of funding Teachers cram their curriculum with skill development and generic competencies because knowledge creativity and originality are too expensive to provide to unmotivated students and parents obsessed with league tables not learning Meanwhile the internet offers a glut of information on everything under the sun a mere mouse click away Bored surfers fill their cursors and minds with irrelevancies We lose the capacity to sift discard and judge Information is no longer for social good but for sale Tara Brabazon argues that this information fetish has been profoundly damaging to our learning institutions and to the ambitions of our students and educators In *The University of Google* she projects a defiant and passionate vision of education as a pathway to renewal where research is based on searching and students are on a journey through knowledge rather than consumers in the shopping centre of cheap ideas Angry humorous and practical in equal measure *The University of Google* is based on real teaching experience and on years of engaged and sometimes exasperated reflection on it It is far from a luddite critique of the information age Tara Brabazon celebrates the possibilities of digital platforms in education but deplors the consequences of placing funding on technology and not teachers In doing so she opens a new debate on how to make our educational system both productive and provocative in the post information age
