Tap Root Investigation Training Manual:

Scientific Method Randall K. Noon, 2009-04-27 Most failure or accident investigations begin at the end of the story after the explosion after the fire has been extinguished or after the collapse In many instances information about the last event and the starting event is known reasonably well Information about what occurred between these endpoints however is often unclear confusing and perhaps contradictory Scientific Method Applications in Failure Investigation and Forensic Science explains how scientific investigative methods can best be used to determine why and how a particular event occurred While employing examples from forensic engineering the book uses principles and ideas applicable to most of the forensic sciences The author examines the role of the failure investigator describes the fundamental method for investigation discusses the optimal way to organize evidence and explores the four most common reasons why some investigations fail The book provides three case studies that exemplify proper report writing contains a special chapter profiling a criminal case by noted forensic specialist Jon J Nordby and offers a reading list of resources for further study Concise and illustrative this volume demonstrates how the scientific method can be applied to failure investigation in ways that avoid flawed reasoning while delivering convincing reconstruction scenarios Investigators can pinpoint where things went wrong providing valuable information that can prevent another catastrophe

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field
