A Study of Items to be Included in a Course Commonly Called Special Methods to Train Chemistry Teachers for Secondary Schools Wyman Wilbert Kunzler, Myron N. Jorgensen, 1958 The teacher with the responsibility of teaching chemistry at the secondary level for the first time is immediately confronted with the task of administering a program of instruction which includes the problems of both the classroom and laboratory Very few of these specific problems have been presented previously in either chemistry or education courses The genuine need for additional material to serve as a practical guide for the beginning high school chemistry teacher has suggested this study and to this end it is dedicated A critical survey of the literature indicated that these problems have been frequently discussed but little effort has been made to bring them together with possible answers and suggestions into a syllabus type outline After personal interviews verified the need of a study to answer these questions a suitable questionnaire was sent to secondary chemistry teachers of several secondary schools mainly in the greater Kansas City and some in the Sacramento California areas As a result of the information obtained from the questionnaire and the study of problems which chemistry teachers face several recommendations are made The lack of training of most secondary

chemistry teachers makes it necessary that help understanding and cooperation come from the college teacher A chemistry methods course should be included in the curriculum of all future chemistry teachers In this way the bridge could be built over the gap between the chemistry and education courses State requirements for certification of chemistry teachers are quite low This fact and the rapidly changing nature of chemistry indicate that continued preparation through advanced courses should be taken by all teachers of chemistry The area of considerable weakness is in the history of chemistry and most teachers in the Kansas City area expressed a desire for a History of Chemistry course This should be offered at regular intervals by the university Problems of text book and laboratory manual selection purchasing supplies and safety measures are salient problems of all chemistry teachers Possible solutions or helps for solutions are offered to assist the chemistry teacher in solving these problems How to Teach Secondary Chemistry and Allied Sciences Hattie D.
