Contributions of Africa's Indigenous Knowledge to the Wave of Digital Technology: Decolonial Perspectives Niyitunga, Eric Blanco,2024-04-09 Africa s contributions to global technological advancements are often overlooked with many scholars claiming that the continent has yet to contribute significantly to digital technology This misconception stems from a need for more understanding and recognition of Africa s indigenous knowledge and its role in shaping the modern world The education curriculum inherited from colonialism must differentiate Africa s values and culture from Western ideals

leading to a devaluation of Africa's mineral wealth in technological advancements. Additionally, the impact of historical events such as the Atlantic slave trade and colonialism on Africa's indigenous knowledge remains largely unexplored, further contributing to the misunderstanding of Africa's technological contributions. **Contributions of Africa's Indigenous Knowledge to the Wave of Digital Technology: Decolonial Perspectives** offers a comprehensive exploration of Africa's indigenous knowledge and its crucial role in the Fourth Industrial Revolution (4IR). By taking a decolonial perspective and examining the literature on African Studies, the book aims to shed light on Africa's significant contributions to digital technology. Through a qualitative research design and an exploratory approach, the book will collect and analyze data from secondary sources to showcase Africa's rich technological advancements and history of innovations.

Ancient Civilizations of the World Denny Rose & Rowan Allen, 2018-05-08 About 5,000 years ago, the first urban societies developed, laying the foundations for the first civilizations. Nearly all civilizations share the same few features: they have abundant food surpluses, contained cities, political bureaucracies, armies, defined religious and social hierarchies, and long-distance trading. Ancient Egyptian culture flourished between c. 5500 BCE with the rise of technology, as evidenced in the glass work of faience, and 30 BCE with the death of Cleopatra VII, the last Ptolemaic ruler of Egypt. It is famous today for the great monuments which celebrated the triumphs of the rulers and honored the gods of the land. The culture is often misunderstood as having been obsessed with death, but had this been so, it is unlikely it would have made the significant impression it did on other ancient cultures such as Greece and Rome. Neolithic means "new stone," even though agriculture was the crowning achievement of the period. Civilizations started out small. Agriculture at first tended to tie only small groups together. These groups also all settled along rivers, important as a reliable and predictable source of water. As time passed, families usually worked the same plot of land over successive generations, leading to the concept of ownership. Ancient mortars and grinding tools unearthed in a large mound in the Zagros Mountains of Iran reveal that people were

grinding wheat and barley about 11 000 years ago Grass pea wild wheat wild barley and lentils were found throughout the site including some of the earliest known samples This was much further east than most sites known for early agriculture This book furnishes with utmost facility to all classes of readers the needed information on ancient civilization The unusual variety of the subject makes this a work of endless fascination
