Date,2000 What I think Date has done is nothing less than to lay out the foundational concepts for the next generation of business logic servers based on predicate logic Such a breakthrough should revolutionize application development in our industry and take business rules to their fullest expression Ronald G Ross Principal Business Rule Solutions LLC Executive Editor DataToKnowledge Newsletter The way we build computer applications is about to change dramatically thanks to a new development technology known as business rules The key idea behind the technology is that we can build applications declaratively instead of procedurally that is we can simply state WHAT needs to be done instead of HOW to do what needs to be done The advantages are obvious ease and rapidity of initial development and subsequent maintenance hardware and software platform independence overall productivity business adaptivity and more What Not How The Business Rules Approach to Application Development is a concise and accessible introduction to this new technology It is written for both managers and technical professionals The book consists of two parts Part I presents a broad overview of what business rules are all about Part II then revisits the ideas in Part I and shows how they fit squarely into the solid tradition of relational technology Topics covered include Presentation rules Database and application rules Building on the data model Potential advantages and disadvantages A new look at relational fundamentals Business rules and the relational model Overall the book provides a good grounding in an important new technology one poised to transform the way we do business in the IT world 0201708507B04062001 **The Mechatronics Handbook - 2 Volume Set** Robert H. Bishop,2018-10-08 The first comprehensive reference on mechatronics The Mechatronics Handbook was quickly embraced as the gold standard in the field From washing machines to coffeemakers to cell phones to the ubiquitous PC in almost every household what these days doesn't take advantage of mechatronics in its design and function In the scant five years since the initial publication of the handbook the latest generation of smart products has made this even more obvious Too much material to cover in a single volume Originally a single volume reference the handbook has grown along with the field The need for easy access to new material on rapid changes in technology especially in computers and software has made the single volume format unwieldy The second edition is offered as two easily digestible books making the material not only more accessible but also more focused Completely revised and updated Robert Bishop's seminal work is still the most exhaustive state of the art treatment of the field available [OOIS 2001](#) Xingxu Wang,Shushma Patel,Ronald Johnston,2012-12-06 Welcome to OOIS 01 and Calgary This is the 7th International Conference on Object Oriented Information Systems OOIS that focus on Object Oriented and Web Based Frameworks for Information Systems In the last few years we've seen significant new development in this field from one off design technologies to reusable frameworks and from web applications to bioinformatic systems We perceive that information processing is one of the most

important activities of human beings Object orientation and frameworks have been the main stream technologies for design and implementation of large scale and complex information systems Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers Users of information systems are increasingly demanding higher performance mobility and personalization in order to realize the dream to access and obtain necessary information anywhere and anytime The new development requires the investigation of new architectures frameworks processes and inter connectivity of information systems at society organization team and personal levels The OOLIS 01 Proceedings has put together a program of 53 papers from leading researchers and practitioners in the field of object technology and information systems
