training course that used the earlier version of Windows 10 Since then we have also published Practical Foundations of Linux Debugging Disassembling Reversing and Practical Foundations of ARM64 Linux Debugging Disassembling Reversing books At that time we thought about revising our Windows course Since then Windows 11 appeared and we also added Docker support for most of our Windows memory dump analysis courses While working on the Accelerated Windows Debugging 4D course we decided to make the second edition of Practical Foundations of Windows Debugging based on WinDbg from Windows 11 SDK and Visual Studio 2022 build tools and an optional Docker support for the exercise environment We also changed the operator to in pseudo code for x64 AT Software engineers coming from managed code or JVM background Software testers Engineers coming from non Wintel environments Windows C C software engineers without assembly language background Security researchers without x86 x64 assembly language background Beginners learning Windows software reverse engineering techniques This introductory training course can complement the more advanced course Accelerated Disassembly Reconstruction and Reversing Revised Edition It may also help with advanced exercises in Accelerated Windows Memory Dump Analysis books This book can also be used as an Intel assembly language and Windows debugging supplement for relevant undergraduate level courses
