service and lighting design issues Mechanical engineers have to deal with motors in HVAC applications and chemical engineers are forced to handle problems involving process control Simple and easy to use yet more than sufficient in rigor and coverage of fundamental concepts this resource teaches EE fundamentals but omits the typical analytical methods that hold little relevance for the audience The authors provide many examples to illustrate concepts as well as homework problems to help readers understand and apply presented material In many cases courses for non electrical engineers or non EEs have presented watered down classical EE material resulting in unpopular courses that students hate and senior faculty members understandingly avoid teaching To remedy this situation and create more well rounded practitioners the authors focus on the true EE needs of non EEs as determined through their own teaching experience as well as significant input from non EE faculty The book provides several important contemporary interdisciplinary examples to support this approach The result is a full color modern narrative that bridges the various EE and non EE curricula and serves as a truly relevant course that students and faculty can both enjoy Fundamentals of Electrical and Electronics Engineering Smarajit Ghosh,2004-08
