On the Cognitive, Ethical, and Scientific Dimensions of Artificial Intelligence Don Berkich, Matteo Vincenzo d'Alfonso, 2019-01-28 This edited volume explores the intersection between philosophy and computing. It features work presented at the 2016 annual meeting of the International Association for Computing and Philosophy. The 23 contributions to this volume neatly represent a cross section of 40 papers, four keynote addresses, and eight symposia as they cut across six distinct research agendas. The volume begins with foundational studies in computation and information epistemology and philosophy of science and logic. The contributions next examine research into computational aspects of cognition and philosophy of mind. This leads to a look at moral dimensions of man-machine interaction as well as issues of trust, privacy, and justice. This multi-disciplinary or better yet a disciplinary investigation reveals the fruitfulness of erasing distinctions and boundaries between established academic disciplines. This should come as no surprise. The computational turn itself is a disciplinary and no former discipline, whether scientific, artistic, or humanistic, has remained unchanged. Rigorous reflection on the nature of these changes opens the door to inquiry into the nature of the world, what constitutes our knowledge of it, and our understanding of our place in it. These investigations are only just beginning. The contributions to this volume make this clear: many encourage further research and end with open questions.

Handbook of Citizen Science in Ecology and Conservation Christopher Andrew Lepczyk, Owen D. Boyle, Timothy L. V. Vargo, 2020. *Handbook of Citizen Science in Ecology and Conservation* is the first practical and comprehensive manual that provides step-by-step instructions for creating natural science research projects that involve collaboration between scientists and the general public. As citizen science projects become increasingly common, there is a growing need for concrete best practices around planning and implementing successful projects that can allow project leaders to guide and gauge success of projects while ensuring the collection of high-quality data. Based on a variety of case studies from several citizen science projects, this is the definitive reference guide for all potential citizen science practitioners, ranging from professors and graduate students to staff at agencies and nongovernmental organizations.
