Getting Started With Zynq Reference Digilentinc:

FPGA-BASED Hardware Accelerators Iouliia Skliarova,Valery Sklyarov,2019-05-30 This book suggests and describes a number of fast parallel circuits for data vector processing using FPGA based hardware accelerators Three primary areas are covered searching sorting and counting in combinational and iterative networks These include the application of traditional structures that rely on comparators swappers as well as alternative networks with a variety of core elements such as adders logical gates and look up tables The iterative technique discussed in the book enables the sequential reuse of relatively large combinational blocks that execute many parallel operations with small propagation delays For each type of network discussed the main focus is on the step by step development of the architectures proposed from initial concepts to synthesizable hardware description language specifications Each type of network is taken through several stages including modeling the desired functionality in software the retrieval and automatic conversion of key functions leading to specifications for optimized hardware modules The resulting specifications are then synthesized implemented and tested in FPGAs using commercial design environments and prototyping boards The methods proposed can be used in a range of data processing applications including traditional sorting the extraction of maximum and minimum subsets from large data sets communication time data processing finding frequently occurring items in a set and Hamming weight distance counters comparators The book is intended to be a valuable support material for university and industrial engineering courses that involve FPGA based circuit and system design

Guide to Computer Processor Architecture Bernard

Goossens,2023-01-25 The book presents a succession of RISC V processor implementations in increasing difficulty non pipelined pipelined deeply pipelined multithreaded multicore Each implementation is shown as an HLS High Level Synthesis code in C which can really be synthesized and tested on an FPGA based development board such a board can be freely obtained from the Xilinx University Program targeting the university professors The book can be useful for three reasons First it is a novel way to introduce computer architecture The codes given can serve as labs for a processor architecture course Second the book content is based on the RISC V Instruction Set Architecture which is an open source machine language promised to become the machine language to be taught replacing DLX and MIPS Third all the designs are implemented through the High Level Synthesis a tool which is able to translate a C program into an IP Intellectual Property Hence the book can serve to engineers willing to implement processors on FPGA and to researchers willing to develop RISC V based hardware simulators
