Rubinov,2006-03-09 Continuous optimization is the study of problems in which we wish to opti mize either maximize or minimize a continuous function usually of several variables often subject to a collection of restrictions on these variables It has its foundation in the development of calculus by Newton and Leibniz in the 17 century Nowadays continuous optimization problems are widespread

in the mathematical modelling of real world systems for a very broad range of applications Solution methods for large multivariable constrained continuous optimization problems using computers began with the work of Dantzig in the late 1940s on the simplex method for linear programming problems Recent research in continuous optimization has produced a variety of theoretical developments solution methods and new areas of applications It is impossible to give a full account of the current trends and modern applications of continuous optimization It is our intention to present a number of topics in order to show the spectrum of current research activities and the development of numerical methods and applications
