Mathematical Methods Calculus Investigation

Stationary points in a function are those where the function's instantaneous rate of change is zero. If a tangent were drawn across that point, the line would be completely horizontal and have no gradient. The function changes direction at turning points, which are stationary positions. All stationary points are turning points, but not all turning points are stationary points.

Points of inflection are points on a graph where the shape shifts from concave to convex or vice versa. There can be a maximum of two turning points and a minimum of zero in a cubic function. Every cubic function, however, must have at least one point of inflection. The goal of this study is to discover the relationship between stationary points and inflection points in a cubic function. The first portion of the enquiry will focus on locating the stationary points and points of inflection in a group of cubic functions and determining a common link between them. The second section investigates cubic functions under various settings in order to test the validity of the discovered relationship regardless of the conditions. The final section looks at how to change the number of stationary points in a cubic function and whether the established relationship still holds for all cubic functions. Finally, the fourth section examines the impact of the first coefficient on the relationship between stationary and inflection points.

The first stage of the enquiry aimed to establish a link between stationary locations and inflection points. This section will look at three cubic functions. To begin, the function's turning points were determined by determining the function's derivative using the differentiation process, which is done either using first principles or by multiplying the power with the number multiplying the variable, subtracting the power by 1, and removing the constant value from the function, represented by the equation $x^n = nx^{n-1}$. The latter procedure was utilised, and the outcome was a quadratic function.

Cubic function a: $y = x^3 - 3x^2 - 9x + 7$

Derivative a: $\frac{dy}{dx} = 3x^2 - 6x - 9$

To find the x intercepts, these were factorised even more. The x values of the intercepts would thus be the same as the x values of the cubic function's stationary points.

Derivative a: $\frac{dy}{dx} = 3(x^2 - 2x - 3)$

$\rightarrow \frac{dy}{dx} = 3(x + 1)(x - 3)$

X intercepts: (-1, 0) and (3, 0)

The x value found was simply replaced into the variables of the cubic function to determine the exact coordinate point for the stationary point.

$y = (-1)^3 - 3(-1)^2 - 9(-1) + 7$
First stationary point: (-1, 12)
$y = 3^3 - 3(3)^2 - 9(3) + 7$
Second stationary point: (3, -20)

In most cases, stationary points are either maximum or minimum turning points, and a sign diagram for the derivative function was used to identify this. Negative areas correspond to areas where the y value is dropping, and vice versa. It is a maximum turning point if the intercept point is between the positive and negative areas, and it is a minimum turning point if the intercept point is between the negative and positive areas.

Maximum turning point: (-1, 12)   Minimum turning point: (3, -20)

Cubic functions generally have sections where the shape of the line drawn is either concave or convex, the point where the change in shape occurs is referred to as the point of inflection. The point was found through the same process used to determine the stationary points, but the derivative function was differentiated instead of the cubic function.

Derivative a: $\frac{dy}{dx} = 3x^2 - 6x - 9$

Second derivative a: $\frac{d^2y}{dx^2} = 6x - 6$

Factorise: $0 = 6(x - 1)$

X intercept: (1, 0)
Substitute: $y = 1^3 - 3(1)^2 - 9(1) + 7$
Point of inflection a: (1, -4)

In order to find which part of a function is concave or convex, another sign diagram can be constructed for the Second derivative function, the negative parts are concave, and the positive parts are convex.

Concave: $x \leq 1$ Convex: $x \geq 1$

The same process was done for function b and c, refer to appendix for calculations. The results are put into a table shown below.

Mathematical Methods:

The book delves into Mathematical Methods. Mathematical Methods is a vital topic that needs to be grasped by everyone, ranging from students and scholars to the general public. This book will furnish comprehensive and in-depth insights into Mathematical Methods, encompassing both the fundamentals and more intricate discussions.

1. The book is structured into several chapters, namely:

    - Chapter 1: Introduction to Mathematical Methods
    - Chapter 2: Essential Elements of Mathematical Methods
    - Chapter 3: Mathematical Methods in Everyday Life
    - Chapter 4: Mathematical Methods in Specific Contexts
    - Chapter 5: Conclusion

2. In chapter 1, the author will provide an overview of Mathematical Methods. The first chapter will explore what Mathematical Methods is, why Mathematical Methods is vital, and how to effectively learn about Mathematical Methods.
3. In chapter 2, this book will delve into the foundational concepts of Mathematical Methods. The second chapter will elucidate the essential principles that need to be understood to grasp Mathematical Methods in its entirety.
4. In chapter 3, the author will examine the practical applications of Mathematical Methods in daily life. The third chapter will showcase real-world examples of how Mathematical Methods can be effectively utilized in everyday scenarios.
5. In chapter 4, the author will scrutinize the relevance of Mathematical Methods in specific contexts. The fourth chapter will explore how Mathematical Methods is applied in specialized fields, such as education, business, and technology.
6. In chapter 5, the author will draw a conclusion about Mathematical Methods. The final chapter will summarize the key points that have been discussed throughout the book.
   This book is crafted in an easy-to-understand language and is complemented by engaging illustrations. It is highly recommended for anyone seeking to gain a comprehensive understanding of Mathematical Methods.
