Fuzzy Logic G. Gerla, 2013-03-09 Fuzzy logic in narrow sense is a promising new chapter of formal logic whose basic ideas were formulated by Lotfi Zadeh see Zadeh 1975 a The aim of this theory is to formalize the approximate reasoning we use in everyday life the object of investigation being the human aptitude to manage vague properties as for example beautiful small plausible believable etc that by their own nature can be satisfied to a degree different from 0 false and 1 true It is worth noting that the traditional deductive framework in many valued logic is different from the one adopted in this book for fuzzy logic in the former logics one always uses a crisp deduction apparatus producing crisp sets of formulas the formulas that are considered logically valid By contrast fuzzy logical deductive machinery is devised to produce a fuzzy set of formulas the theorems from a fuzzy set of formulas the hypotheses Approximate reasoning has generated a very interesting literature in recent years However in spite of several basic results in our opinion we are still far from a satisfactory setting of this very hard and mysterious subject The aim of this book is to furnish some theoretical devices and to sketch a general framework for fuzzy logic This is also in accordance with the non Fregean attitude of the book *The Friend*, 1867

Future Vision and Trends on Shapes, Geometry and Algebra Raffaele de Amicis, Giuseppe Conti, 2014-06-13 Mathematical algorithms are a fundamental component of Computer Aided Design and Manufacturing CAD CAM systems This book provides a bridge between algebraic geometry and geometric modelling algorithms formulated within a computer science framework Apart from the algebraic geometry topics covered the entire book is based on the unifying concept of using algebraic techniques properly specialized to solve geometric problems to seriously improve accuracy robustness and efficiency of CAD systems It provides new approaches as well as industrial applications to deform surfaces when animating virtual characters to automatically compare images of handwritten signatures and to improve control of NC machines This book further introduces a noteworthy representation based on 2D contours which is essential to model the metal sheet in industrial processes It additionally reviews applications of numerical

algebraic geometry to differential equations systems with multiple solutions and bifurcations Future Vision and Trends on Shapes Geometry and Algebra is aimed specialists in the area of mathematics and computer science on the one hand and on the other hand at those who want to become familiar with the practical application of algebraic geometry and geometric modelling such as students researchers and doctorates
