Euchner,2022-02-22 Large corporations must become far more agile in implementing new products and new business models The pace of technology change the blurring of industry boundaries and the agility and resources of startups in almost every industry segment demand it Many companies have begun to adopt the principles of Lean Startup in order to increase the pace and agility of their innovation initiatives but most have had limited success in doing so Although the principles seem intuitive and straightforward there are challenges to using them inside an existing company especially in a manufacturing environment The biggest requirements beyond those espoused for startups are Developing a business model for the new venture that not only works in the marketplace but also works within the constraints of the corporation Managing the conflicts that inevitably arise with the current operating business every business that has operated over decades has well established ways of doing things that may not fit the required pace and flexibility required of a new venture Conducting business experiments with physical goods as well as with software offerings Managing the risk of investing in a new domain for executives that are used to investing where the risks are more clearly understood This book describes a systematic approach for implementing Lean Startup in large organizations It builds on the principles of Lean Startup and adds additional practices required to manage the realities of the corporate context The book describes how it is done with examples from practice in companies that have successfully used the methods It complements Lean Startup methods with elements of corporate innovation practices developed by leading academics and practitioners It brings these practices together for the first time in a practical and integrated way **The Lean Startup** Eric Ries,2017-02 In The Lean Startup the successful serial entrepreneur Eric Ries throws traditional thinking out of the window and presents his radically new methodology for building a successful business Most startups says Ries fail but they fail for preventable reasons Lean

thinking is the key to success and represents the next paradigm shift in business management Most people assume that the key to a lucrative business is expert management a high performance product and good customer service But the real secret Ries argues is creating things that people want to buy in the first place Startups generally fail not because of missed deadlines faulty products or blown budgets but because entrepreneurs are too focused on their vision on their great new idea and don't know what it is that their customers really want The solution according to Ries is lean thinking and validated learning Rather than designing an elaborate business plan and committing large amounts of financial and human resources from the start first find out what you can about your potential customers And rather than adopting a static product centric approach test your idea on your customers respond to their feedback and constantly be prepared to adjust your product as well as your business
