Camera Calibration Example Inside Mines:

3D Recording and Interpretation for Maritime Archaeology John K. McCarthy, Jonathan Benjamin, Trevor Winton, Wendy van Duivenvoorde, 2019-03-06 This open access peer reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University Adelaide Australia in November 2016 Content is based on but not limited to the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology The volume consists of contributions from leading international experts as well as up and coming early career researchers from around the globe The content of the book includes recording and analysis of maritime archaeology through emerging technologies including both practical and theoretical contributions Topics include photogrammetric recording laser scanning marine geophysical 3D survey techniques virtual reality 3D modelling and reconstruction data integration and Geographic Information Systems The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches This convergence of digital technologies such as underwater photography and photogrammetry 3D sonar 3D virtual reality and 3D printing has highlighted a pressing need for these new methodologies to be considered together both in terms of defining the state of the art and for consideration of future directions As a scholarly publication the audience for the book includes students and researchers as well as professionals working in various aspects of archaeology heritage management education museums and public policy It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to those in other disciplines who are now engaging with 3D recording and visualization

Detection and Remediation Technologies for Mines and Minelike Targets IX, 2004

Physics of Automatic Target Recognition Firooz Sadjadi, Bahram Javidi, 2007-09-04 The Physics of Automatic Target Recognition is part of a series focusing on Advanced Sciences and Technologies for Security Applications This book will address the fundamental physical bases of sensing and information extraction in the state of the art automatic target recognition field We will explore both passive and active multispectral sensing polarimetric diversity complex signature exploitation sensor and processing adaptation transformation of electromagnetic and acoustic waves in their interactions with targets background clutter transmission media and sensing elements The general inverse scattering and advanced signal processing techniques and scientific evaluation methodologies being used in this multi disciplinary field will be part of this exposition The issues of modeling of target signatures in various spectral modalities LADAR IR SAR high resolution radar acoustic seismic visible hyperspectral in diverse geometric aspects will be addressed The problem of clutter modeling from a physics point of view will be also explored The methods for signal processing and classification will cover concepts such as sensor adaptive and artificial neural networks time reversal filter

The issue of invariants of sensor and transmission transformations geometrical spectral and polarimetric invariants will be explored These invariants are crucial in the development of low latency and computationally manageable ATR systems The book will address the issue of transformations that a signal goes through in its interactions with targets and background in its passage through a medium and its final reception by a sensor It is only through understanding these transformations that one can hope in addressing the inverse problem the identification of originating sources of a signal target recognition

Advanced Sciences and Technologies for Security Applications focuses on research monographs in the areas of Recognition and identification including optical imaging biometrics authentication verification and smart surveillance systems Biological and chemical threat detection including biosensors aerosols materials detection and forensics Secure information systems including encryption and optical and photonic systems The series is intended to give an overview at the highest research level at the frontier of research in the physical sciences

Mine Surveying and Mining Area Protection Violetta Sokoła-Szewioła, Patrycja Jarczyk, 2025-12-08 The conference on Mine Surveying and Mining Area Protection is devoted to exploring both theoretical and practical aspects of surface and mine surveying with a special emphasis on new measurement techniques and technologies as well as mining area protection This proceedings compilation contains cutting edge research and innovative insights into various aspects of surface deformation including description methods measurement techniques and accuracy of forecasts It also looks at the development of post mining areas and hazard monitoring and management Through diverse case studies and practical examples this book serves as an essential resource for both industry professionals and research and development teams This book is intended for a diverse audience including engineering students academic researchers industry practitioners regulatory specialists mining consultants surveying professionals government authorities and individuals interested in mining operations and oversight
