Carbohydrate Biotechnology Protocols:

Carbohydrate Biotechnology Protocols Christopher Bucke, 2008-02-05 We are in a phase of the evolution of biotechnology in which the true and potential commercial importance of carbohydrates is becoming appreciated more fully Progress in providing hard facts to establish the commercial value of polysaccharides and oligosaccharides is limited as always by lack of funding and by a relative shortage of skilled practitioners in the production and analysis of those materials Carbohydrate science has a reputation not unmerited for technical difficulty owing to the structural similarity of the many monosaccharide monomers and the potential and real complexity of oligosaccharides and polysaccharides particularly heterosaccharides containing many different monomers Modern analytical and synthetic methods in many cases using enzyme technology are beginning to allow this complexity to be unraveled Carbohydrate Biotechnology Protocols is aimed at those newcomers who have an interest in the production and use of carbohydrate materials but have shied away from involvement for lack of detailed descriptions of appropriate methods including the type of practical hints that may be provided by those skilled in those methods but that are rarely described in research papers The majority of the contributions to this book conform to the established format of the Methods in Biotechnology series They begin with the theoretical and commercial background to the method or group of methods provide a list of the reagents and equipment required for the procedure then give a detailed step by step description of how to carry out the protocol

Marine Carbohydrates: Fundamentals and Applications, Part B, 2014-10-01 Marine Carbohydrates Fundamentals and Applications brings together the diverse range of research in this important area which leads to clinical

and industrialized products The volume number 73 focuses on marine carbohydrates in isolation biological and biomedical applications and provides the latest trends and developments on marine carbohydrates Advances in Food and Nutrition Research recognizes the integral relationship between the food and nutritional sciences and brings together outstanding and comprehensive reviews that highlight this relationship Volumes provide those in academia and industry with the latest information on emerging research in these constantly evolving sciences Includes the isolation techniques for the exploration of the marine habitat for novel polysaccharides Discusses biological applications such as antioxidant antiallergic antidiabetic antiobesity and antiviral activity of marine carbohydrates Provides an insight into present trends and approaches for marine carbohydrates

Microbial Processes and Products José-Luis Barredo, 2008-02-05 The development of biotechnology over the last 20 years and particularly the use of recombinant DNA techniques has rapidly expanded the opportunities for human benefits from living resources Efforts to reduce pollution prevent environmental damage combat microbial infection improve food production and so on can each involve fermentation or the environmental lease of microorganisms Many products of fermentation technology such as alcoholic beverages bread antibiotics amino acids vitamins enzymes and others have been influenced by the progress of recombinant DNA techniques The development of new products or the more efficient manufacturing of those already being produced often involve the use of microorganisms as cell factories for many productions and biotransformations Microbial Processes and Products is intended to provide practical experimental laboratory procedures for a wide range of processes and products mediated by microorganisms Although not an exhaustive treatise it provides a detailed step by step description of the most recent developments in such applied biotechnological processes The detailed protocols we provide are cross referenced in the Notes section contain critical details lists of problems and their troubleshooting as well as safety recommendations that may not normally appear in journal articles and can be particularly useful for those unfamiliar with specific techniques

Phytoremediation Neil Willey, 2008-02-05 Phytoremediation Methods and Reviews presents the most innovative recent methodological developments in phytoremediation research and outlines a variety of the contexts in which phytoremediation has begun to be applied A significant portion of this volume is devoted to groundbreaking methods for the production of plants that are able to degrade take up or tolerate the effects of pollutants Phytoremediation Methods and Reviews adopts a multidisciplinary approach to the examination of principles and practices of phytoremediation from molecular manipulation to field application Parts I and II discuss detailed protocols for achieving several different goals of phytoremediation including enhancing contaminant degradation uptake and tolerance by plants exploiting plant diversity for phytoremediation modifying contaminant availability and experimentally analyzing phytoremediation potential Parts III and IV examine a variety of progressive techniques for phytoremediation and explore their implementation and success on a global scale This cutting edge volume highlights the myriad of contexts in which phytoremediation can be applied and energizes new research by describing ways in which barriers to success have been

recently overcome Laboratory Methods in Enzymology: Cell, Lipid and Carbohydrate, 2013-10-30 Methods in Enzymology volumes provide an indispensable tool for the researcher Each volume is carefully written and edited by experts to contain state of the art reviews and step by step protocols In this volume we have brought together a number of core protocols concentrating on Cell Lipid and Carbohydrate complementing the traditional content that is found in past present and future Methods in Enzymology volumes Indispensable tool for the researcher Carefully written and edited by experts to contain step by step protocols In this volume we have brought together a number of core protocols concentrating on Cell Lipid and Carbohydrate Immobilization of Enzymes and Cells José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties Microbial Enzymes and Biotransformations Jose Luis Barredo, 2008-02-05 Leading experts in enzyme manipulation describe in detail their cutting edge techniques for the screening evolution production immobilization and application of enzymes These readily reproducible methods can be used to improve enzyme function by directed evolution to covalently immobilize enzymes to microencapsulate enzymes and cells and to manufacture enzymes for human health nutrition and environmental protection Overview chapters on microorganisms as a source of metabolic and enzymatic diversity and on the fast moving field of enzyme biosensors are presented Microbial Enzymes and Biotransformations offers laboratory and industrial scientists a wealth of proven enzymatic protocols that show clearly how to go from laboratory results to successful industrial applications The Art of Carbohydrate Analysis Gerrit J. Gerwig, 2021-10-23 The growing importance of glycobiology and carbohydrate chemistry in modern biotechnology and the pharmaceutical industry makes accurate carbohydrate analysis indispensable This book provides the principles and protocols of various fundamental carbohydrate analysis methods Choice of method is entirely dependent upon the type of material being investigated biological samples food products etc and the level of structural detail required i e sugar content compositional analysis linkages between the sugar components or the total

chemical structure of a given molecule Full structural characterization of carbohydrate chains requires significant time resources and skill in several methods of analysis no single technique can address all glycan analysis needs This book summarizes several existing analytical techniques both chemical and physical in an introductory volume designed for the non expert researcher or novice scientist While background in carbohydrate chemistry is assumed all information necessary to understanding the described techniques is addressed in the text

Natural Products Isolation Satya D.

Sarker,2008-02-05 The term natural products spans an extremely large and diverse range of chemical compounds derived and isolated from biological sources Our interest in natural products can be traced back thousands of years for their usefulness to humankind and this continues to the present day Compounds and extracts derived from the biosphere have found uses in medicine agriculture cosmetics and food in ancient and modern societies around the world Therefore the ability to access natural products understand their usefulness and derive applications has been a major driving force in the field of natural product research The first edition of Natural Products Isolation provided readers for the first time with some practical guidance in the process of extraction and isolation of natural products and was the result of Richard Cannell s unique vision and tireless efforts Unfortunately Richard Cannell died in 1999 soon after completing the first edition We are indebted to him and hope this new edition pays adequate tribute to his excellent work The first edition laid down the ground rules and established the techniques available at the time Since its publication in 1998 there have been significant developments in some areas in natural product isolation To capture these developments publication of a second edition is long overdue and we believe it brings the work up to date while still covering many basic techniques known to save time and effort and capable of results equivalent to those from more recent and expensive techniques
