ITS Sensors and Architectures for Traffic Management and Connected Vehicles Lawrence A. Klein, 2017-08-07 An intelligent transportation system ITS offers considerable opportunities for increasing the safety efficiency and predictability of traffic flow and reducing vehicle emissions Sensors or detectors enable the effective gathering of arterial and controlled access highway information in support of automatic incident detection active transportation and demand management traffic adaptive signal control and ramp and freeway metering and dispatching of emergency response providers As traffic flow sensors are integrated with big data sources such as connected and cooperative vehicles and cell phones and other Bluetooth enabled devices more accurate and timely traffic flow information can be obtained The book examines the roles of traffic management centers that serve cities counties and other regions and the collocation issues that ensue when multiple agencies share the same space It describes sensor applications and data requirements for several ITS strategies sensor technologies sensor installation initialization and field testing procedures and alternate sources of traffic flow data The book addresses concerns related to the introduction of automated and connected vehicles and the benefits that systems engineering and national ITS architectures in the US Europe Japan and elsewhere bring to ITS Sensor and data fusion benefits to traffic management are described while the Bayesian and Dempster Shafer approaches to data fusion are discussed in more detail ITS Sensors and Architectures for Traffic Management and Connected Vehicles suits the needs of personnel in transportation institutes and highway agencies and students in undergraduate or graduate transportation engineering courses

Participation in Urban Transformations Chiara Scanagatta,2023-07-11 Humanity has always seen a close relationship between the place of living and the ways of life Today the quality of life certainly improves if places of living are attentive to the ever changing needs of communities The space of the city should not be static but dynamic and flexible The aim of this work is therefore to pay more and more attention to the in depth studies on which many architectural scholars are working today necessary for the fabbricato to be more and more responsive to the population that uses it both in the sense of the physical spaces and the materials that guarantee its quality and efficiency It is a theme to which architects are paying plenty of attention because it is becoming increasingly urgent also in view of the European Union s expectations on the matter to investigate the urban and building components and the effects they produce in terms of e g quality of materials functionality of spaces living habits of the population proximity of services This work arose from an experience of personal collaboration in a European project of innovative participatory design carried out in Verona Sud during the PhD period Subsequently it was analysed and examined in depth which theoretical and operational aspects actually make it possible to implement urban transformations that link the relations between the environment and quality of life In this large field it therefore becomes predominant to re propose the centrality of attention to the community s expectations ways of living decision making systems techniques used knowledge and understanding of objective data on the environment and thus to overcome common stereotypes on all these issues
