Insight into Theoretical and Applied Informatics Andrzej Yatsko, Walery Suslow, 2015-01-01 The book is addressed to young people interested in computer technologies and computer science The objective of this book is to provide the reader with all the necessary elements to get him or her started in the modern field of informatics and to allow him or her to become aware of the relationship between key areas of computer science The book is addressed not only to future software developers but also to all who are interested in computing in a widely understood sense The authors also expect that some computer professionals will want to review this book to lift themselves above the daily grind and to embrace the excellence of the whole field of computer science Unlike existing books this one bypasses issues concerning the construction of computers and focuses only on information processing Recognizing the importance of the human factor in information processing the authors intend to present the theoretical foundations of computer science software development rules and some business aspects of informatics in non technocratic humanistic terms

Clinical Information Systems Bruce I. Blum, 2012-12-06 As its name implies this book deals with clinical information systems The clinical information system or CIS is an automated system with a long term database containing clinical information used for patient care This definition excludes business systems no clinical data physiological monitoring systems no long term database and many research systems not used in patient care The theses of this book are a that CIS technology is mature b that the CIS will have a major impact upon patient care and the health delivery system and c that the number of commercial systems which now offer these potential benefits is very small The objective of this book is to establish the above theses and thereby a inform both users and developers b increase the demand for more sophisticated products and finally c provide marketplace incentives to advance the state of the art The CIS is an application of computer technology for a specific class of problems Its development requires a knowledge of

the technology with an understanding of the application area As with any tool based application the scope of the product will be limited by the capability of the tool In the case of the CIS reliable computers with comprehensive database facilities became commercially available in the early 1970s By the mid 1970s there was a maturation of the literature and evaluations of 5 years use began to appear As will be shown there have been surprisingly few new ideas introduced since the 1970s
