

Unit 14 Task 1

A: Investigate the causes and effects of physiological disorder

P1 Explain the causes, signs, and symptoms of several types of physiological disorder on service users.

Physiological Disorders- *disease that causes problems with the body's ability to perform its duties, making it malfunction.*

In this section of my assignment, I will explain the causes, signs and symptoms of Parkinson diseases and coronary heart disease.

Parkinson's Disease

National Institute of Neurological Disorders. (2024). states "Parkinson diseases is a deteriorating illness that affects the nervous system. The symptoms appear slowly at first. The first sign may be a barely noticeable tremor in one hand. Apart from the typical tremors, the condition can also cause immobility or sluggishness."

According to Jaime Eke. (2023) "A person's walking style may change gradually, which could be a precursor of Parkinson's disease. Parkinson's disease patients may walk more slowly or with dragged feet. This is commonly described as a "shuffling gait." The gait may become erratic, with the individual walking abruptly faster or slower or altering the length of their stride."

According to Cleveland Clinic. (2022). "The condition known as micrographic is characterised by unusually small or cramped handwriting. Micrographic is linked by medical professionals to neurological illnesses or neurodegenerative diseases like Parkinson's disease."

George demigod. (2015) states that "Tremors, or shaking, are more common in the hands and arms and are more likely to happen when the limb is at rest or relaxed. slowness of movement (bradykinesia): a condition in which daily tasks become more difficult to complete and cause a characteristically slow, shuffling gait with extremely short steps significantly slower than usual, which can make daily tasks challenging and give the impression of a sluggish, shuffling gait with little steps muscular rigidity, or stiffness and tension in the muscles, can cause severe muscle cramps (dystonia) and make it difficult to move and produce facial expressions."

About 15 percent of people with Parkinson's disease have a family history of the condition, and family-linked cases can result from genetic mutations in a group of genes — LRRK2, PARK2, PARK7, PINK1 or the SNCA gene

Because they are adjustable and can impact the incidence and progression of Parkinson's disease (PD), lifestyle factors such as physical activity, alcohol and caffeine consumption, and smoking habit are significant. Numerous prior investigations have documented the correlation between lifestyle factors and Parkinson's disease (PD) incidence, progression, and mortality.
