## **X App Reading Comprehension This Month:**

*Monthly Catalog of United States Government Publications*, 1993      **Language across neurodevelopmental disorders** Marisa Filipe, Lénia Carvalhais, Leonard Abbeduto, Sónia Frota, 2023-03-13      **Handbook of Research on the Education of Young Children** Olivia N. Saracho, 2019-10-30

The Handbook of Research on the Education of Young Children is the essential reference on research on early childhood education throughout the world. This outstanding resource provides a comprehensive research overview of important contemporary issues as well as the information necessary to make knowledgeable judgments about these issues. Now in its fourth edition, this handbook features all new sections on social emotional learning, non-cognitive assessment, child development, early childhood education content areas, teacher preparation, technology, multimedia, and English language learners. With thorough updates to chapters and references, this new edition remains the cutting edge resource for making the field's extensive knowledge base readily available and accessible to researchers and educators. It is a valuable resource for all of those who work and study in the field of early childhood education, including researchers, educators, policy makers, librarians, and school administrators. This volume addresses critical up-to-date research on several disciplines such as child development, early childhood education, psychology, curriculum, teacher preparation, policy evaluation, strategies, technology, and multimedia exposure.

**Language Development in the Digital Age** Mila Vulchanova, Giosuè Baggio, Angelo Cangelosi, Linda Smith, 2017-10-18

The digital age is changing our children's lives and childhood dramatically. New technologies transform the way people interact with each other, the way stories are shared and distributed, and the way reality is presented and perceived. Parents experience that toddlers can handle tablets and apps with a level of sophistication that their grandparents can only envy. The question of how the ecology of the child affects the acquisition of competencies and skills has been approached from different angles in different disciplines. In linguistics, psychology, and neuroscience, the central question addressed concerns the specific role of exposure to language. Two influential types of theory have been proposed. On one view, the capacity to learn language is hard-wired in the human brain; linguistic input is merely a trigger for language to develop. On an alternative view, language acquisition depends on the linguistic environment of the child and specifically on language input provided through child-adult communication and interaction. The latter view further specifies that factors in situated interaction are crucial for language learning to take place. In the fields of information technology, artificial intelligence, and robotics, a current theme is to create robots that develop as children do and to establish how embodiment and interaction support language learning in these machines. In the field of human-machine interaction, research is investigating whether using a physical robot rather than a virtual agent or a computer-based video has a positive effect on language development. The Research Topic will address the following issues: What are the methodological challenges faced by research on language acquisition in the digital age? How should traditional theories and models of language acquisition be revised to account for the multimodal and multichannel

nature of language learning in the digital age How should existing and future technologies be developed and transformed so as to be most beneficial for child language learning and cognition Can new technologies be tailored to support child growth and most importantly can they be designed in order to enhance specifically vulnerable children s language learning environment and opportunities What kind of learning mechanisms are involved How can artificial intelligence and robotics technologies as robot tutors support language development These questions and issues can only be addressed by means of an interdisciplinary approach that aims at developing new methods of data collection and analysis in cross sectional and longitudinal perspectives We welcome contributions addressing these questions from an interdisciplinary perspective both theoretically and empirically
