MotorBoating ,1979-01 **Quantum Interacting Particle Systems** Luigi Accardi,Franco Fagnola,2002 The dynamics of infinite classical lattice systems has been considered and has led to the study of the properties of ergodicity and convergence to equilibrium of a new class of Markov semigroups Quantum analogues of these semigroups have also been considered However the problem of deriving these Markovian semigroups and what is much more interesting the associated stochastic flows as limits of Hamiltonian systems rather than postulating their form on a phenomenological basis is essentially open both in the classical case and in the quantum case This book presents a conjecture that by coupling a quantum spin system in finite volume to a quantum field via a suitable interaction applying the stochastic golden rule and taking the thermodynamic limit one may obtain a class of quantum flows which when restricted to an appropriate Abelian subalgebra gives rise to the classical interacting particle systems studied in classical statistical mechanics **Kwazulu**
