Laboratory Production Of Cattle Embryos:

Laboratory Production of Cattle Embryos Ian Gordon, 1994-01-01 This book is devoted to technologies which are still developing but which are likely to take over from artificial insemination as the farmer's main tool to produce large numbers of high quality calves. Cattle oocyte recovery in vitro fertilization and embryo transfer are techniques which permit cows to produce calves of a genetic quality and composition quite unlike that of the surrogate mother herself. They also enable cows under suitable conditions to produce two calves rather than one. There are now over one hundred laboratories involved in producing cattle embryos by in vitro maturation and fertilization of oocytes. Indeed the author's own work has led to the establishment of a biotechnology company which has commercialized the production process. Based on a comprehensive review of the literature this book presents current knowledge of the laboratory production of cattle embryos and the way in which such embryos might be used in commercial application and research. It is shown that the processes may be the starting point for many other developments in cattle breeding and in the future be applied to other farm animals and also humans. The book written by one of the world's leading authorities on the subject is a major reference work for those in the academic and commercial sectors concerned with animal breeding, reproduction and biotechnology.

Laboratory Production of Cattle Embryos Ian Gordon, 2003-01-01 3000 new references added since the first edition. Gives information necessary to produce embryos totally through in vitro techniques. Shows commercial applications of embryo and oocyte research. Cattle remain at the forefront of many new developments in reproductive technology and what can be done for the cow today will later be applicable to other farm livestock and perhaps humans. This new edition reviews the considerable advances and issues in embryo production technology based on reports since the first edition in 1994. This is a must have volume for those who own the first edition and in itself an incredibly informative text.

Milk Composition, Production and Biotechnology R. A. S. Welch, 1997. Major changes have recently taken place in the value attached to components of milk. Although approximately half the energy in milk is contained in fat, fat is rapidly decreasing in value relative to protein. This has come about because of the increased availability of competitively priced plant derived edible oils and because of the perceived health problems associated with animal fat in the human diet. Such changes have major implications for the dairy sector particularly in developed countries. Against this

background this book presents a timely review of developments in milk production and consumption of changes in milk component values and of the opportunities that biotechnology provides to alter the composition of and add value to milk on the farm. The subject coverage is very broad ranging from nutritional aspects of pastures and forages to rumen microbiology, genetics and reproductive technologies, milk biochemistry and environmental implications. It is based on a conference held in Wellington, New Zealand, in February 1996 and sponsored by the OECD and AgResearch. Contributors include leading research workers from North America, Europe, Japan, Australia and New Zealand. It provides an invaluable overview of the subject suitable as a reference book for advanced students, researchers and advisers in dairy science as well as related disciplines such as grassland, nutritional and food sciences.

World Dictionary of Livestock Breeds, Types and Varieties Ian Lauder Mason, 1996 This dictionary covers cattle sheep
pigs goats horses donkeys and buffalo It includes all names which have been applied to interbreeding groups of these species
whether they are called breeds sub breeds types varieties strains or lines The region or country of origin of each group is
given and this is followed by a very brief description of the breed in terms of products color and major morphological
features There is a note on the history of the breed and the dates of formation of breed societies and herdbooks Synonyms for
its name are listed as well as the present conservation status This new edition includes approximately 9 000 entries of which
5 000 are main entries and 4 000 are cross references This represents an increase on the third edition of 18% for main
entries and 13% for cross references The highest proportion of new breed entries are in the horse and pig chapters
Furthermore some 2 300 entries 30% have been amended These include 400 major changes such as new name extinction or
the extension of a bare name to a complete entry They also include 1 900 entries with minor changes for example new breed
society new synonyms additions to distribution or description changes in spelling or of conservation status China features
strongly in all additions and amendments In addition to these changes references to USSR Yugoslavia and Czechoslovakia
have been corrected in accordance with the current country names Overall the book continues to represent the standard
reference work for all concerned with domestic livestock particularly those involved in animal breeding and genetics
