American Society for Composites Michael Hyer, Suong Hoa, Ozden Ochoa, Mehdi Hojjati, 2011-06-28 Automotive Composites P.K. Mallick, 2025-12-24 Automotive Composites addresses the materials design and manufacturing of fiber reinforced composites (FRCs) for structural automotive applications. The use of composites in the automotive industry is critically important for the design of lightweight structures to meet fuel economy standards, reduce greenhouse gas emissions, and increase battery range in electric vehicles. This book discusses key issues around the manufacturing and mass scale application of these composites in the automotive industry. FEATURES: Teaches basic principles of FRCs for determining their mechanical and thermal behaviors. Describes the manufacturing processes suitable for mass production of automotive composite components. Discusses the joining of automotive composites with themselves and with other materials in the multimaterial construction of future automobiles. Considers the material selection process, recycling, and cost issues. Includes multiple application examples around manufacturing and the design process and the performance characteristics of automotive composites vis vis steels and aluminum alloys. Offers end of chapter problems and worked examples. This textbook is aimed at mechanical and materials engineering students studying automotive composites as well as professional engineers developing these materials for industry application. A solutions manual and figure slides are available to adopting professors.

Sustainable Composites for Lightweight Applications Hom Nath Dhakal, Sikiru Oluwarotimi Ismail, 2020-11-22 Carbon and glass fibre reinforced composite materials have been used for many years in several different types of applications. However, these conventional composites are derived from non-renewable reinforcements and they pose a significant threat to the environment. Government legislation and consumer behaviour have recently forced many industries to adapt sustainable composites. Industries such as automotive, marine, and aerospace are now seeking sustainable lightweight composites with the aim to reduce the overall weight of the components with enhanced materials and design aspects. Therefore, there is high demand on research for the development of sustainable lightweight composites. This book presents a comprehensive review of lightweight composites with the central aim to increase their use in key industrial sectors such as automotive, marine, and aerospace. There is no such book currently available that is dedicated to sustainable lightweight applications covering important topics such as key drivers for lightweight composites, mechanical properties, damage characterisation, durability, and environmental aspects. Key topics that are addressed include: The roles of reinforcements and matrices in composite materials; Sustainable natural fibre reinforcements and their morphological structures; Lightweight applications and properties requirements; Design, manufacturing processes and their effects on properties; Testing and damage characterisation of composite materials; Sustainable composites and techniques for property enhancement; Future trends and challenges for sustainable composites in lightweight applications. It will be a valuable reference resource for those working in material science, polymer science, materials engineering, and industries involved in

the manufacture of automotive and aerospace components from lightweight composite materials Provides a comprehensive review of sustainable lightweight composites looking at key industrial applications such as automotive marine and aerospace and construction Important relationships between structure and properties are analysed in detail Enhancement of properties through hybrid systems are also explored with emphasis on design materials selection and manufacturing techniques
