, *Secure Smart Embedded Devices, Platforms and Applications* Konstantinos Markantonakis, Keith Mayes, 2013-09-14 New generations of IT users are increasingly abstracted from the underlying devices and platforms that provide and safeguard their services As a result they may have little awareness that they are critically dependent on the embedded security devices that are becoming pervasive in daily modern life *Secure Smart Embedded Devices Platforms and Applications* provides a broad overview of the many security and practical issues of embedded devices tokens and their operation systems platforms and main applications It also addresses a diverse range of industry government initiatives and considerations while focusing strongly on technical and practical security issues The benefits and pitfalls of developing and deploying applications that rely on embedded systems and their security functionality are presented A sufficient level of technical detail to support embedded systems is provided throughout the text although the book is quite readable for those seeking awareness through an initial overview of the topics This edited volume benefits from the contributions of industry and academic experts and helps provide a cross discipline overview of the security and practical issues for embedded systems tokens and platforms It is an ideal complement to the earlier work *Smart Cards Tokens Security and Applications* from the same editors

Cloud Computing Dan C. Marinescu, 2022-02-15 *Cloud Computing Theory and Practice* Third Edition provides students and IT professionals with an in depth analysis of the cloud from the ground up After an introduction to network centric computing and network centric content the book reviews basic concepts of concurrency and parallel and distributed systems presents critical components of the cloud ecosystem as cloud service providers cloud access cloud data storage and cloud hardware and software covers cloud applications and cloud security and presents research topics in cloud computing Specific topics covered include resource virtualization resource management and scheduling and advanced topics like the impact of scale on efficiency cloud scheduling subject to deadlines alternative cloud architectures and vehicular clouds An included glossary covers terms grouped in several categories from general to services virtualization desirable attributes and security Presents updated content throughout chapters on concurrency cloud hardware and software challenges posed by big data mobile applications and advanced topics Includes an expanded appendix that presents several cloud computing projects Provides more than 400 references in the text including recent research results in several areas related to cloud computing

Database and Expert Systems Applications Sven Hartmann, Josef K ung, Gabriele Kotsis, A Min Tjoa, Ismail Khalil, 2020-09-13 The double volumes LNCS 12391 12392 constitutes the papers of the 31st International Conference on Database and Expert Systems Applications DEXA 2020 which will be held online in September 2020 The 38 full papers presented together with 20 short papers plus 1 keynote papers in these volumes were carefully reviewed and selected from a total of 190 submissions

Parallel Processing, 1980 to 2020 Robert Kuhn, David Padua, 2022-05-31 This historical survey of parallel processing from 1980 to 2020 is a follow up to the authors 1981 Tutorial on Parallel Processing

which covered the state of the art in hardware programming languages and applications Here we cover the evolution of the field since 1980 in parallel computers ranging from the Cyber 205 to clusters now approaching an exaflop to multicore microprocessors and Graphic Processing Units GPUs in commodity personal devices parallel programming notations such as OpenMP MPI message passing and CUDA streaming notation and seven parallel applications such as finite element analysis and computer vision Some things that looked like they would be major trends in 1981 such as big Single Instruction Multiple Data arrays disappeared for some time but have been revived recently in deep neural network processors There are now major trends that did not exist in 1980 such as GPUs distributed memory machines and parallel processing in nearly every commodity device This book is intended for those that already have some knowledge of parallel processing today and want to learn about the history of the three areas In parallel hardware every major parallel architecture type from 1980 has scaled up in performance and scaled out into commodity microprocessors and GPUs so that every personal and embedded device is a parallel processor There has been a confluence of parallel architecture types into hybrid parallel systems Much of the impetus for change has been Moore s Law but as clock speed increases have stopped and feature size decreases have slowed down there has been increased demand on parallel processing to continue performance gains In programming notations and compilers we observe that the roots of today s programming notations existed before 1980 And that through a great deal of research the most widely used programming notations today although the result of much broadening of these roots remain close to target system architectures allowing the programmer to almost explicitly use the target s parallelism to the best of their ability The parallel versions of applications directly or indirectly impact nearly everyone computer expert or not and parallelism has brought about major breakthroughs in numerous application areas Seven parallel applications are studied in this book

AI Systems Performance Engineering Chris Fregly, 2025-11-11 Elevate your AI system performance capabilities with this definitive guide to maximizing efficiency across every layer of your AI infrastructure In today s era of ever growing generative models AI Systems Performance Engineering provides engineers researchers and developers with a hands on set of actionable optimization strategies Learn to co optimize hardware software and algorithms to build resilient scalable and cost effective AI systems that excel in both training and inference Authored by Chris Fregly a performance focused engineering and product leader this resource transforms complex AI systems into streamlined high impact AI solutions Inside you ll discover step by step methodologies for fine tuning GPU CUDA kernels PyTorch based algorithms and multinode training and inference systems You ll also master the art of scaling GPU clusters for high performance distributed model training jobs and inference servers The book ends with a 175 item checklist of proven ready to use optimizations Codesign and optimize hardware software and algorithms to achieve maximum throughput and cost savings Implement cutting edge inference strategies that reduce latency and boost throughput in real world settings Utilize industry leading scalability tools and frameworks Profile diagnose and eliminate performance bottlenecks across complex AI pipelines

There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving. However, it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation. Attempts have been made to achieve real time frame rates using PC cluster systems. While these provide enough performance, they are also expensive and less flexible. Approaches that use GPU hardware acceleration on single workstations achieve interactive frame rates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene. The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras. High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving. Also, several speed up techniques are presented to increase efficiency. Since the entire processing is done on a single PC, the framework can be applied to mobile setups, enabling a wide range of further applications. The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations. It is shown that the new approach can outperform the latter by more than one magnitude. The downloadable introduction has been written specifically for this offer. Its contents are only a subset of the real introductory chapter of the thesis.
