Multiphysics Modelling of Fluid-Particulate Systems Hassan Khawaja, Mojtaba Moatamedi, 2020-03-14 Multiphysics Modelling of Fluid Particulate Systems provides an explanation of how to model fluid particulate systems using Eulerian and Lagrangian methods The computational cost and relative merits of the different methods are compared with recommendations on where and how to apply them provided The science underlying the fluid particulate phenomena involves computational fluid dynamics for liquids and gases computational particle dynamics solids and mass and heat transfer In order to simulate these systems it is essential to model the interactions between phases and the fluids and particles themselves This book details instructions for several numerical methods of dealing with this complex problem This book is essential reading for researchers from all backgrounds interested in multiphase flows or fluid solid modeling as well as engineers working on related problems in chemical engineering food science process engineering geophysics or metallurgical processing Provides detailed coverage of Resolved and Unresolved Computational Fluid Dynamics Discrete Element Method CFD DEM Smoothed Particle Hydrodynamics and their various attributes Gives an excellent summary of a range of simulation techniques and provides numerical examples Starts with a broad introduction to fluid particulate systems to help readers from a range of disciplines grasp fundamental principles

Advances in Polymer Processing 2020 Christian Hopmann, Rainer Dahlmann, 2020-03-10 This book gathers the proceedings of the International Symposium on Plastics Technology which was held on March 10 2020 in Aachen Germany and was organised by the Institute for Plastics Processing IKV in Industry and Craft at RWTH Aachen University Peer reviewed by an international scientific committee the conference proceedings comprise the papers presented by the international speakers Topics covered include circular economy extrusion lightweight technologies simulation and digitisation injection moulding hybrid materials and additive manufacturing In these fields key themes for plastics technologies have been identified that will shape the face of research and industry for the next decade In their contributions the authors present the latest scientific findings and discuss topical issues in plastics technologies The symposium offered an inspiring forum for the exchange on research and innovation for discussing urgent questions and providing impulses for the future of plastics technology

Modelling Diesel Combustion P. A. Lakshminarayanan, Yogesh V. Aghav, 2022-01-21 This book comprehensively discusses diesel combustion phenomena like ignition delay fuel air mixing rate of heat release and emissions of smoke particulate and nitric oxide It enables quantitative evaluation of these important phenomena and parameters Most importantly it attempts to model them with constants that are independent of engine types and hence they could be applied by the engineers and researchers for a general engine This book emphasizes the importance of the spray at the wall in precisely describing the heat release and emissions for most of the engines on and off road It gives models for heat release and emissions Every model is thoroughly validated by detailed experiments using a broad range of engines The book describes an elegant quasi one dimensional model for heat release in

diesel engines with single as well as multiple injections The book describes how the two aspects namely fuel injection rate and the diameter of the combustion bowl in the piston have enabled meeting advanced emission noise and performance standards The book also discusses the topics of computational fluid dynamics encompassing RANS and LES models of turbulence Given the contents this book will be useful for students researchers and professionals working in the area of vehicle engineering and engine technology This book will also be a good professional book for practising engineers in the field of combustion engines and automotive engineering

Computational Fluid Dynamics for Wind Engineering R. Panneer Selvam, 2022-09-06 COMPUTATIONAL FLUID DYNAMICS FOR WIND ENGINEERING An intuitive and comprehensive exploration of computational fluid dynamics in the study of wind engineering Computational Fluid Dynamics for Wind Engineering provides readers with a detailed overview of the use of computational fluid dynamics CFD in understanding wind loading on structures a problem becoming more pronounced as urban density increases and buildings become larger The work emphasizes the application of CFD to practical problems in wind loading and helps readers understand important associated factors such as turbulent flow around buildings and bridges The author with extensive research experience in this and related fields offers relevant and engaging practice material to help readers learn and retain the concepts discussed and each chapter includes accessible summaries at the end In addition the use of the OpenFOAM tool an open source wind engineering application is explored Computational Fluid Dynamics for Wind Engineering covers topics such as Fluid mechanics turbulence in fluid mechanics turbulence modelling and mathematical modelling of wind engineering problems The finite difference method for CFD solutions to the incompressible Navier Stokes equations visualization and animation in CFD and the application of CFD to building and bridge aerodynamics How to compare CFD analysis with wind tunnel measurements field measurements and the ASCE 7 pressure coefficients Wind effects and strain on large structures Providing comprehensive coverage of how CFD can explain wind load on structures along with helpful examples of practical applications Computational Fluid Dynamics for Wind Engineering serves as an invaluable resource for senior undergraduate students graduate students researchers and practitioners of civil and structural engineering

Algorithms and Architectures for Parallel Processing, Part II Yang Xiang, Alfredo Cuzzocrea, Michael Hobbs, Wanlei Zhou, 2011-10-07 This two volume set LNCS 7016 and LNCS 7017 constitutes the refereed proceedings of the 11th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2011 held in Melbourne Australia in October 2011 The second volume includes 37 papers from one symposium and three workshops held together with ICA3PP 2011 main conference These are 16 papers from the 2011 International Symposium on Advances of Distributed Computing and Networking ADCN 2011 10 papers of the 4th IEEE International Workshop on Internet and Distributed Computing Systems IDCS 2011 7 papers belonging to the III International Workshop on Multicore and Multithreaded Architectures and Algorithms M2A2 2011 as well as 4 papers of the 1st IEEE International Workshop on Parallel Architectures for Bioinformatics Systems HardBio 2011

Data Science in Applications Gintautas Dzemyda, Jolita Bernatavičienė, Janusz Kacprzyk, 2023-03-09 This book provides an overview of a wide range of relevant applications and reveals how to solve them Many of the latest applications in finance technology education medicine and other important and relevant fields are data driven The volumes of data are enormous Specific methods need to be developed or adapted to solve a particular problem It illustrates data science in applications These applications have in common the discovery of knowledge in data and the use of this knowledge to make real decisions The set of examples presented serves as a recipe book for their direct application to similar problems or as a guide for the development of new more sophisticated approaches The intended readership is data scientists looking for appropriate solutions to their problems In addition the examples provided serves as material for lectures at universities

Parallel Computing: On the Road to Exascale Gerhard R. Joubert, Hugh Leather, Mark Parsons, Frans Peters, 2016-04-15 As predicted by Gordon E Moore in 1965 the performance of computer processors increased at an exponential rate Nevertheless the increases in computing speeds of single processor machines were eventually curtailed by physical constraints This led to the development of parallel computing and whilst progress has been made in this field the complexities of parallel algorithm design the deficiencies of the available software development tools and the complexity of scheduling tasks over thousands and even millions of processing nodes represent a major challenge to the construction and use of more powerful parallel systems This book presents the proceedings of the biennial International Conference on Parallel Computing ParCo2015 held in Edinburgh Scotland in September 2015 Topics covered include computer architecture and performance programming models and methods as well as applications The book also includes two invited talks and a number of mini symposia Exascale computing holds enormous promise in terms of increasing scientific knowledge acquisition and thus contributing to the future well being and prosperity of mankind A number of innovative approaches to the development and use of future high performance and high throughput systems are to be found in this book which will be of interest to all those whose work involves the handling and processing of large amounts of data
