Off-line Programming of Industrial Robots Alfred Storr,J. F. McWaters,1987 Industrial robots are now being more readily included into highly integrated expensive manufacturing systems The development of off line teaching methods has thus become increasingly important if costly on line programming time is to be avoided This combined with the fact that the programming aspect now forms one of the major bottlenecks delaying the expansion of robot applications makes this book most timely in its attempt to offer solutions to the problem The comparison of methods and experiments contained in this volume will be of help in establishing guidelines for future industrial use of robots

Programming strategies are examined as are assembly applications simulation programming aids and programming for a CIM environment A number of examples are included illustrating the current state of off line techniques
