The book begins with detailed coverage of preformulation concepts emphasizing drug excipient interactions, stability, kinetics, and dispersion systems such as emulsions, suspensions, and SMEDDS. It also elaborates on large and small volume parenterals focusing on physiological and formulation considerations, manufacturing and evaluation techniques. A major strength of the book lies in its chapter on optimization techniques which introduces essential statistical tools like response surface methodology, factorial and contour designs crucial for formulation development. The section on validation provides exhaustive insight into various types of validation: calibration, URS, DQ, IQ, OQ, and PQ along with ICH and WHO regulatory guidelines. In addition, the book thoroughly explores current Good Manufacturing Practices (cGMP) detailing objectives, policies, facility layout, and equipment maintenance ensuring compliance with global quality standards. The industrial management chapter gives a clear view of production organization, materials handling, inventory control, budgeting, and sales forecasting, integrating business management principles into pharmaceuticals. Another highlight is the inclusion of Total Quality Management (TQM) emphasizing quality integration across all pharmaceutical operations. The section on compression and compaction delves into tablet physics, frictional effects, and compaction profiling essential for solid dosage formulation. It also discusses consolidation, diffusion, and dissolution parameters linking them with pharmacokinetics and biopharmaceutical principles. The book offers valuable tools such as Heckel plots, Higuchi and Peppas models, and similarity factors f_1 and f_2 supported by statistical tests like t-test, ANOVA, and chi-square, enabling precise data interpretation. Written in a lucid, easy-to-understand style with neatly labeled figures, the text encourages self-learning and conceptual clarity.
