Research on the etiology of adult psychopathology and its relationship with childhood trauma has focused primarily on specific forms of maltreatment. This study developed an instrument for the assessment of childhood and adolescence trauma that would aid in identifying the role of co-occurring childhood stressors and chronic adverse conditions. The Complex Trauma Questionnaire (ComplexTQ), in both clinician and self-report versions, is a measure for the assessment of multi-type maltreatment: physical, psychological, and sexual abuse; physical and emotional neglect as well as other traumatic experiences, such rejection, role reversal, witnessing domestic violence, separations, and losses. The four-point Likert scale allows to specifically indicate with which caregiver the traumatic experience has occurred. A total of 229 participants, a sample of 79 nonclinical and that of 150 high-risk and clinical participants, were assessed with the ComplexTQ clinician version applied to Adult Attachment Interview (AAI) transcripts. Initial analyses indicate acceptable inter-rater reliability. A good fit to a 6-factor model regarding the experience with the mother and to a 5-factor model with the experience with the father was obtained; the internal consistency of factors derived was good. Convergent validity was provided with the AAI scales. ComplexTQ factors discriminated normative from high-risk and clinical samples. The findings suggest a promising, reliable, and valid measurement of early relational trauma that is reported; furthermore, it is easy to complete and is useful for both research and clinical practice.

Introduction

Over the past two decades, evidence regarding the harmful impact of early maltreatment has accumulated significantly. Two-thirds of adolescents and adults report having suffered from child relational trauma, which represents a root cause of major public health issues (Copeland et al., 2007; van der Kolk and d'Andrea, 2010). Previous research has primarily focused on single types of maltreatment sequelae; however, most maltreated children experience more than one form of abuse and neglect (Kessler, 2000; Spinazzola et al., 2005; Pynoos et al., 2008). Indeed, in literature on child

Contextual Behavior Therapy for Sexual and Gender Minority Clients Matthew D. Skinta, 2020-11-22 Combining theory, research, and case studies, this book shows clinicians how to apply transdiagnostic contextual behavioral approaches when working with sexual and gender minority (SGM) clients. The text first examines minority stress theory through the lens of contextual behavior analysis. Subsequent chapters illustrate the application of therapeutic techniques drawn from acceptance and commitment therapy, functional analytic psychotherapy, and compassion-focused therapy. The book concludes with a close look at special areas of consideration, including pre-surgical evaluation, the impact of HIV on SGM communities, ethical considerations, and future directions in therapy with SGM clients. Every chapter provides a series of diverse vignettes that illustrate how each aspect of treatment might build upon the last, along with a list of recommended books for further exploration of that topic. This book offers a unique, integrated approach that can be used for case conceptualization and followed as a treatment manual for professionals or graduate students with a foundation in SGM psychology.
