**Posthuman Management** Matthew E. Gladden,2016-08-07 What are the best practices for leading a workforce in which human employees have merged cognitively and physically with electronic information systems and work alongside social robots artificial life forms and self aware networks that are colleagues rather than simply tools How does one manage organizational structures and activities that span actual and virtual worlds How are the forces of technological posthumanization transforming the theory and practice of

management This volume explores the reality that an organization's workers, managers, customers, and other stakeholders increasingly comprise a complex network of human agents, artificial agents, and hybrid human-synthetic entities. The first part of the book develops the theoretical foundations of an emerging organizational posthumanism and presents frameworks for understanding and managing the evolving workplace relationship between human and synthetic beings. Other chapters investigate topics such as the likelihood that social robots might utilize charismatic authority to lead human workers, potential roles of AIs as managers of cross-cultural virtual teams, the ethics and legality of entrusting organizational decision-making to spatially diffuse robots that have no discernible physical form, quantitative approaches to comparing managerial capabilities of human and artificial agents, the creation of artificial life forms that function as autonomous enterprises competing against human businesses, neural implants as gateways that allow human users to participate in new forms of organizational life, and the implications of advanced neuroprosthetics for information security and business model design. As the first comprehensive application of posthumanist methodologies to management, this volume will interest management scholars and management practitioners who must understand and guide the forces of technologization that are rapidly reshaping organizations' form, dynamics, and societal roles.
