Temporal Patterns of Communication in Social Networks Giovanna Miritello,2013-04-23 The main interest of this research has been in understanding and characterizing large networks of human interactions as continuously changing objects In fact although many real social networks are dynamic networks whose elements and properties continuously change over time traditional approaches to social network analysis are essentially static thus neglecting all temporal aspects Specifically we have investigated the role that temporal patterns of human interaction play in three main fields of social network analysis and data mining characterization of time or attention allocation in social networks prediction of link decay persistence and information spreading In order to address this we analyzed large anonymized data sets of phone call communication traces over long periods of time Access to these observations was granted by Telefonica Research Spain The findings that emerge from our research indicate that the observed heterogeneities and correlations of human temporal patterns of interaction significantly affect the traditional view of social networks shifting from a very steady to a highly complex entity Since structure and dynamics are tightly coupled they cannot be disentangled in the analysis and modeling of human behavior though traditional

models seek to do so Our results impact not only the way in which social network are traditionally characterized but more importantly also the understanding and modeling phenomena such as group formation spread of epidemics and the dissemination of ideas opinions and information [Indian Science Abstracts](#) ,2001 **Biological Science Fundamentals and Systematics** Alessandro Minelli,Giancarlo Contrafatto,2009 History and Scope of the Biological Sciences History of Biology Characteristics of Living Beings Levels of Biotic Organization Population Species and Communities Philosophy of Biological Sciences [Engineering Mechanics](#) David J.
