### **Exam 2023**

How many different types of molecules are shown in Model 1? - ANSWER two: circle and triangle

Number of triangles and circles on each side of membrane? - ANSWER 14 triangles on left: 0 triangles on right

12 circles on left: 13 circles on right

Which shape is larger? - ANSWER triangle

Describe direction of movement of molecules in Model 1. - ANSWER Random-all directions

Which molecules are able to pass through the semi-permeable membrane? - ANSWER Circles can fit through the gaps due to small size and are nearly equally distributed on both sides of the membrane.

Would you expect the Model 1 system to change over time? - ANSWER No. The triangles will remain on the left side because they are too big to pass through membrane. Circles will remain evenly distributed on both sides due to size and random movement.

What two major types of biological molecules compose the majority of the cell membrane in Model 2? - ANSWER Phospholipids and membrane spanning proteins.

How many different protein molecules are found in Model 2? - ANSWER Four. Two small surface proteins and 2 membrane spanning proteins.

What is the difference between the position of the surface proteins and the membrane-spanning proteins? - ANSWER Surface proteins do not span the cell membrane.

When a carbohydrate chain is attached to a protein, what is the structure called? - ANSWER Glycoprotein; glyco = carbohydrate

When a carbohydrate is attached to a phospholipid, what is the structure called? - ANSWER Glycolipid

**The Plant Plasma Membrane** Christer Larsson, Ian M. Moller, 2012-12-06 The plasma membrane forms the living barrier between the cell and its surroundings For this reason it has a wide range of important functions related to the

regulation of the composition of the cell interior and to communication with the cell exterior. The plasma membrane has therefore attracted a lot of research interest. Until the early 1970s it was only possible to study the plasma membrane in situ, its structure e.g. by electron microscopy and its function e.g. by uptake of radioactively labeled compounds into the intact cell or tissue. The first isolation of plant protoplasts by enzymatic digestion of the cell wall in the early 1970s was an important step forward in that it provided direct access to the outer surface of the plasma membrane. More importantly, T. K. Hodges and R. J. Leonard in 1972 published the description of a method by which a fraction enriched in plasma membranes could be isolated from plant tissues using sucrose gradient centrifugation. As a result, the 1970s saw a leap forward in our understanding of the structure and function of the plasma membrane. In 1981, S. Widell and C. Larsson published the first of a series of papers in which plasma membrane vesicles of high yield and purity were isolated from a wide range of plant tissues using aqueous polymer two-phase partitioning.

*The Structure of Biological Membranes* Philip L. Yeagle, 2011-07-18

Biological membranes provide the fundamental structure of cells and viruses. Because much of what happens in a cell or in a virus occurs on in or across biological membranes, the study of membranes has rapidly permeated the fields of biology, pharmaceutical chemistry and materials science.

**Concepts of Membrane Structure** Ronald Aloia, 2012-12-02

*Membrane Fluidity in Biology* Volume 1. *Concepts of Membrane Structure* covers membrane properties influenced by alterations in membrane lipid compositions and other organizational parameters that are encompassed by the term fluidity. This book is composed of eight chapters that discuss the significance of fluidity changes in both normal and pathological cellular functions. This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes. This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion. The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed. This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope. Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles. Finally, the

concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena
