((4-1))

4.1 Calculate the *three lowest energy levels*, together with their degeneracies, for the following systems (assume equal-mass *distinguishable* particles).

- (a) Three noninteracting spin $\frac{1}{2}$ particles in a box of length L .
- (b) Four noninteracting spin $\frac{1}{2}$ particles in a box of length L .

((Solution))

The energy is given by

$$E(n_x, n_y, n_z) = E_0(n_x^2 + n_y^2 + n_z^2)$$

where $E_0 = \frac{\hbar^2}{2m} \left(\frac{\pi}{L}\right)^2$, and n_x, n_y, n_z are positive integers.

We consider the Pauli principle.

Sakurai Solutions Chapter 4:

Princeton Problems in Physics with Solutions Nathan Newbury, Mark Newman, 2015-03-25 Aimed at helping the physics student to develop a solid grasp of basic graduate level material this book presents worked solutions to a wide range of informative problems These problems have been culled from the preliminary and general examinations created by the physics department at Princeton University for its graduate program The authors all students who have successfully completed the examinations selected these problems on the basis of usefulness interest and originality and have provided highly detailed solutions to each one Their book will be a valuable resource not only to other students but to college physics teachers as well The first four chapters pose problems in the areas of mechanics electricity and magnetism quantum mechanics and thermodynamics and statistical mechanics thereby serving as a review of material typically covered in undergraduate courses Later chapters deal with material new to most first year graduate students challenging them on such topics as condensed matter relativity and astrophysics nuclear physics elementary particles and atomic and general physics

The Physics of Alfvén Waves Neil F. Cramer, 2011-02-10 Low frequency wave modes of magnetized inhomogeneous plasmas have been subject to intense study in the last decade because they play important roles in the transport of energy in the plasmas The Alfvén wave heating scheme has been investigated as a supplementary heating scheme for fusion plasma devices and it has been invoked as a model of the heating of the solar and stellar coronae This book covers the latest research into the properties and applications of low frequency wave modes in magnetized plasmas the Alfvén waves and magneto acoustic waves in the context of laboratory space and astrophysical plasmas In particular non ideal effects on the dispersion relation and absorption properties of linear and non linear waves are included such as ion cyclotron effects friction between the ionized plasma and a background gas of neutral atoms and the interaction of the plasma with dust particles The book also surveys the theory of Alfvén and magnetoacoustic waves in inhomogeneous plasmas as occur in realistic laboratory space and astrophysical plasmas with resulting localized wave modes such as surface waves Waves are considered under a variety of plasma conditions ranging from cold cosmic plasmas to hot laboratory and solar plasmas to the relativistic plasmas around pulsars

Anglo-American Connections in Japanese Chemistry Yoshiyuki Kikuchi, 2013-12-18 Anglo Japanese and American Japanese connections in chemistry had a major impact on the institutionalization of scientific and technological higher education in Japan from the late nineteenth century and onwards They helped define the structure of Japanese scientific pedagogical and research system that lasted well into the post World War II period of massive technological development when it became one of the biggest providers of chemists and chemical engineers in the world next to Europe and the United States In telling this story Anglo American Connections in Japanese
