

7. What  $W$  is necessary to start the system of blocks moving to the right? The coefficient of friction is 0.10 and the pulleys are assumed frictionless.

8. Find the least value of  $P$  required to cause the system of blocks shown in the figure to have impending motion to the left. The coefficient of friction under each block is 0.20.

9. A homogeneous block of weight  $W$  rests upon the incline shown in the figure. If the coefficient of friction is 0.30, determine the greatest height  $h$  at which a force  $P$  parallel to the incline may be applied so that the block will slide up the incline without tipping over.

**Fundamentals of Physics, Part 3, Chapters 22 - 33, Enhanced Problems Version** David Halliday, Robert Resnick, 2002-04-16 The primary goal of this text is to provide students with a solid understanding of fundamental physics concepts and to help them apply this conceptual understanding to quantitative problem solving [The Atomic Components of Thought](#) John R. Anderson, Christian J. Lebiere, 2014-01-09 This book achieves a goal that was set 25 years ago when the HAM theory of human memory was published This theory reflected one of a number of then current efforts to create a theory of human cognition that met the twin goals of precision and complexity Up until then the standard for precision had been the mathematical theories of the 1950s and 1960s These theories took the form of precise models of specific experiments along with some informal verbally stated understanding of how they could be extended to new experiments They seemed to fall far short of capturing the breadth and power of human cognition that was being demonstrated by the new experimental work in human cognition The next 10 years saw two major efforts to address the problems of scope In 1976 the ACT theory was first described and included a production rule system of procedural memory to complement HAM's declarative memory This provided a computationally adequate system which was indeed capable of accounting for all sorts of cognition In 1993 a new version of ACT ACT R was published This was an effort to summarize the theoretical progress made on skill acquisition in the intervening 10 years and to tune the subsymbolic level of ACT R with the insights of the rational analysis of cognition Although the appearance of generally available full function code set off a series of events which was hardly planned it resulted in this book The catalyst for this was the emergence of a user community Lebiere insisted that assembling a critical mass of users was essential to the ultimate success of the theory and that a physical gathering was the only way to achieve that goal This resulted in the First Annual ACT R Summer School and Workshop held in 1994 In writing the book the authors became seized by an aspiration that went beyond just describing the theory correctly They decided to try to display what the theory could do by collecting together and describing some of its in house applications This book reflects decades of work in ACT R accumulated by many researchers The chapters are authored by the people that did that particular work No doubt the reader will be impressed by the scope of the research and the quality of the individual work Less apparent but no less important was the effort that everyone put into achieving the overall consistency and technical integrity of the book This is the first work in cognitive science to precisely model such a wide range of phenomena with a single theory *Extending Explanation-Based Learning by Generalizing the Structure of Explanations* Jude W. Shavlik, 2014-07-10 *Extending Explanation Based Learning by Generalizing the Structure of Explanations* presents several fully implemented computer systems that reflect theories of how to extend an interesting subfield of machine learning called explanation based learning This book discusses the need for generalizing explanation structures relevance to research areas outside machine learning and schema based problem solving The result of standard explanation based learning BAGGER generalization algorithm and

empirical analysis of explanation based learning are also elaborated This text likewise covers the effect of increased problem complexity rule access strategies empirical study of BAGGER2 and related work in similarity based learning This publication is suitable for readers interested in machine learning especially explanation based learning **Investigating**

**Explanation-Based Learning** Gerald DeJong,2012-12-06 Explanation Based Learning EBL can generally be viewed as substituting background knowledge for the large training set of exemplars needed by conventional or empirical machine learning systems The background knowledge is used automatically to construct an explanation of a few training exemplars The learned concept is generalized directly from this explanation The first EBL systems of the modern era were Mitchell s LEX2 Silver s LP and De Jong s KIDNAP natural language system Two of these systems Mitchell s and De Jong s have led to extensive follow up research in EBL This book outlines the significant steps in EBL research of the Illinois group under De Jong This volume describes theoretical research and computer systems that use a broad range of formalisms schemas production systems qualitative reasoning models non monotonic logic situation calculus and some home grown ad hoc representations This has been done consciously to avoid sacrificing the ultimate research significance in favor of the expediency of any particular formalism The ultimate goal of course is to adopt or devise the right formalism

atoms and electrons behave Are they just like marbles basketballs suns and planets but smaller They are not Atoms and electrons behave in a fashion quite unlike the familiar marbles basketballs suns and planets This sophomore level textbook delves into the counterintuitive intricate but ultimately fascinating world of quantum mechanics Building both physical insight and mathematical technique it opens up a new world to the discerning reader After discussing experimental demonstrations showing that atoms behave differently from marbles the book builds up the phenomena of the quantum world quantization interference and entanglement in the simplest possible system the qubit Once the phenomena are introduced it builds mathematical machinery for describing them It goes on to generalize those concepts and that machinery to more intricate systems Special attention is paid to identical particles the source of considerable student confusion In the last chapter students get a taste of what is not treated in the book and are invited to continue exploring quantum mechanics Problems in the book test both conceptual and technical knowledge and invite students to develop their own questions

**Chatgpt and Other Generative AI Tools** Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years applications of generative artificial intelligence GAI have found rapidly growing use in medicine science and daily life Large language models LLMs opened up new avenues in particular for education LLMs have been used to create interactive educational content for students stimulate their curiosity generate code explanations and develop assessment questions Additionally LLMs been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects The fields understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies
