Masters,2019-03-22 Could UFOs and Aliens simply be us but from the future This provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past Dr Michael P Masters a professor of biological anthropology specializing in human evolutionary anatomy archaeology and biomedicine explores how the persistence of long term biological and cultural trends in human evolution may ultimately result in us becoming the ones piloting these disc shaped craft which are likely the very devices that allow our future progeny to venture backward across the landscape of time Moreover these extraterrestrials are ubiquitously described as bipedal large brained hairless human like beings who communicate with us in our own languages and who possess technology advanced beyond but clearly built upon our own These accounts coupled with a thorough understanding of the past and modern human condition point to the continuation of established biological and cultural trends here on Earth long into the distant human future *Mathematical Reviews* ,2007

Baez,2012 Just as groups can have representations on vector spaces 2 groups have

representations on 2 vector spaces but Lie 2 groups typically have few representations on the finite dimensional 2 vector spaces introduced by Kapranov and Voevodsky Therefore Crane Sheppard and Yetter introduced certain infinite dimensional 2 vector spaces called measurable categories to study infinite dimensional representations of certain Lie 2 groups and German and North American mathematicians continue that work here After introductory matters they cover representations of 2 groups and measurable categories representations on measurable categories There is no index Annotation 2012 Book News Inc Portland OR booknews com

General physics, relativity, astronomy and plasmas,1989 Fashion, Faith, and Fantasy in the New Physics of the Universe Roger Penrose,2024-10-22 Nobel Prize winning physicist Roger Penrose questions some of the most fashionable ideas in physics today including string theory What can fashionable ideas blind faith or pure fantasy possibly have to do with the scientific quest to understand the universe Surely theoretical physicists are immune to mere trends dogmatic beliefs or flights of fancy In fact acclaimed physicist and bestselling author Roger Penrose argues that researchers working at the extreme frontiers of physics are just as susceptible to these forces as anyone else In this provocative book he argues that fashion faith and fantasy while sometimes productive and even essential in physics may be leading today s researchers astray in three of the field s most important areas string theory quantum mechanics and cosmology Arguing that string theory has veered away from physical reality by positing six extra hidden dimensions Penrose cautions that the fashionable nature of a theory can cloud our judgment of its plausibility In the case of quantum mechanics its stunning success in explaining the atomic universe has led to an uncritical faith that it must also apply to reasonably massive objects and Penrose responds by suggesting possible changes in quantum theory Turning to cosmology he argues that most of the current fantastical ideas about the origins of the universe cannot be true but that an even wilder reality may lie behind them Finally Penrose describes how fashion faith and fantasy have ironically also shaped his own work from twistor theory a possible alternative to string theory that is beginning to acquire a fashionable status to conformal cyclic cosmology an idea so fantastic that it could be called conformal crazy cosmology The result is an important critique of some of the most significant developments in physics today from one of its most eminent figures
