Schorer,2008 Many timber trestle railroad bridges in Wisconsin have experienced deterioration and are in need of rehabilitation In addition the railroad industry is increasing the weights of cars The combined effect of heavier loads and deterioration threatens to cut short the service life of timber bridges One of the most critical problems that has been identified was the overloading of timber piles in bridges which can be remedied by creating a stiffer pile cap The goal of this investigation was to show that mechanically fastened fiber reinforced polymer MFFRP strips fastened to timber with screws can be used to create composite action between two beams in flexure or truss action between two deep beams Ultimately this may help redistribute the loads to piles when FRP strips are used as struts on cap beams over short spans Several test series were conducted with beams in flexure deep beams over short spans and full scale specimens to determine the manner in which FRP strips improved the members performance Tests were conducted over various widths of beams and lengths of spans to investigate how the geometry affected the strengthening s action improved load distribution to piles Mechanically fastened FRP strips were found to be effective in developing composite action in slender beams in flexure meaning the stiffness of the system was increased by using MF FRP strips This MF FRP method showed great potential for creating composite stiffer double pile caps     Bridge Maintenance, Safety, Management and Life Extension Airong Chen,Dan Frangopol,Xin Ruan,2014-05-27 Bridge Maintenance Safety Management and Life Extension contains the lectures and papers presented at IABMAS 2014 the Seventh International Conference on Bridge Maintenance Safety and Management IABMAS 2014 held in Shanghai China July 7 11 2014 This set consists of a book of abstracts and a DVD containing the full papers of 396 contributions presented at IABMAS 2014 including the T Y Lin Lecture nine Keynote Lectures and 386 technical papers from about 40 countries All major aspects of bridge maintenance safety

*Environmental Geoinformatics* Joseph L. Awange, John B. Kyalo Kiema, 2013-06-13 There is no doubt that today perhaps more than ever before humanity faces a myriad of complex and demanding challenges These include natural resource depletion and environmental degradation food and water insecurity energy shortages diminishing biodiversity increasing losses from natural disasters and climate change with its associated potentially devastating consequences such as rising sea levels These human induced and natural impacts on the environment need to be well understood in order to develop informed policies decisions and remedial measures to mitigate current and future negative impacts To achieve this continuous monitoring and management of the environment to acquire data that can be soundly and rigorously analyzed to provide information about its current state and changing patterns and thereby allow predictions of possible future impacts are essential Developing pragmatic and sustainable solutions to address these and many other similar challenges requires the use of geodata and the application of geoinformatics This book presents the concepts and applications of geoinformatics a multidisciplinary field that has at its core different technologies that support the acquisition analysis and visualization of geodata for environmental monitoring and management We depart from the 4D to the 5D data paradigm which defines geodata accurately consistently rapidly and completely in order to be useful without any restrictions in space time or scale to represent a truly global dimension of the digital Earth The book also features the state of the art discussion of Web GIS The concepts and applications of geoinformatics presented in this book will be of benefit to decision makers across a wide range of fields including those at environmental agencies in the emergency services public health and epidemiology crime mapping environmental management agencies tourist industry market analysis and e commerce or mineral exploration among many others The title and subtitle of this textbook convey a distinct message Monitoring the passive part in the subtitle refers to observation and data acquisition whereas management the active component stands for operation and performance The topic is our environment which is intimately related to geoinformatics The overall message is all the mentioned elements do interact and must not be separated Hans Peter Bahr Prof Dr Ing Dr h c Karlsruhe Institute of
