Developing Early Literacy Christopher J. Lonigan, Timothy Shanahan, 2008 The National Assessment of Educational Progress reveals that 37 percent of U S fourth graders fail to achieve basic levels of reading achievement In 1997 the U S Congress asked that a review of research be conducted to determine what could be done to improve reading and writing achievement The resulting Report of the National Reading Panel Teaching Children to Read NICHD 2000 has been influential in helping to guide reading education policy and practice in the United States However that report did not examine the implications of instructional practices used with children from birth through age 5 To address this gap in the knowledge base the National Early Literacy Panel NELP was convened The panel was asked to apply a similar methodological review process to that used by the National Reading Panel NRP to issues of instructional practices for young children so that parents and teachers could better support their emerging literacy skills The NELP report represents a systematic and extensive synthesis of the published research literature concerning children s early literacy skills It provides educators and policymakers with important information about the early skills that are implicated in later literacy learning as well as information about the type of instruction that can enhance these skills The results also identify areas in which additional research is needed The meta analyses conducted by the panel showed that a wide range of interventions had a positive impact on children s early literacy learning

Developing Early Literacy The National for Literacy, 2013-01-30 The ability to read and write is fundamental to full participation in American society Our nation of farmers and mechanics has been transformed into one in which economic civic and social success depend on educational attainment for all particularly in literacy The rapid influx of technology into

our daily lives and the internationalization of the economic marketplace have raised the demand for a literate citizenry to the highest levels ever. Many Americans cannot read well enough to take full advantage of the benefits of society or to contribute fully to its sustenance. Those who are low in literacy are paid less, are more often out of work, are less likely to vote, are less informed about civic affairs, are less able to meet the health care needs of their families, and are more likely to have trouble with the law or to become ensnared in other socially harmful activities. Literacy is implicated in virtually every sphere of our daily lives, no matter how mundane or profound, from following a prescription to taking part in a religious service, from sending an email to buying something over the Internet, from reading a sign for directions to reading a book to one's children. This report represents a systematic and extensive synthesis of the published research literature concerning children's early literacy skills. It provides educators and policymakers with important information about the early skills that are implicated in later literacy learning, as well as information about the type of instruction that can enhance these skills. The results also identify areas in which additional research is needed. The meta-analyses conducted by the authors showed that a wide range of interventions had a positive impact on children's early literacy learning. However, these positive results were due to the nature and intensity of the instructional activities examined in the studies. There is now a clear need for translational research. Researchers or their agents delivered many of the interventions; examinations of more typical implementations of such programs within early childhood education are needed. Many of the high-impact instructional strategies involved activities and procedures different from those typically seen in early childhood classrooms. These interventions were usually delivered as one-on-one or small group activities; they occurred frequently and they were adult-directed. Few interpretable studies evaluated the effects of merely providing a literacy-rich or language-rich classroom environment. Developing Early Literacy Susan Hill, 2006. Focuses on the development of reading, writing, speaking, and listening for children from birth to eight years.
