Advances in Non-Invasive Biomedical Signal Sensing and Processing with Machine Learning Saeed Mian Qaisar,Humaira

Nisar, Abdulhamit Subasi, 2023-03-01 This book presents the modern technological advancements and revolutions in the biomedical sector. Progress in the contemporary sensing Internet of Things (IoT) and machine learning algorithms and architectures have introduced new approaches in the mobile healthcare. A continuous observation of patients with critical health situations is required. It allows monitoring of their health status during daily life activities such as during sports, walking, and sleeping. It is realizable by intelligently hybridizing the modern IoT framework, wireless biomedical implants, and cloud computing. Such solutions are currently under development and in testing phases by healthcare and governmental institutions, research laboratories, and biomedical companies. The biomedical signals such as electrocardiogram (ECG), electroencephalogram (EEG), Electromyography (EMG), phonocardiogram (PCG), Chronic Obstructive Pulmonary (COP), Electrooculography (EoG), photoplethysmography (PPG), and image modalities such as positron emission tomography (PET), magnetic resonance imaging (MRI), and computerized tomography (CT) are non-invasively acquired, measured, and processed via the biomedical sensors and gadgets. These signals and images represent the activities and conditions of human cardiovascular, neural, vision, and cerebral systems. Multi-channel sensing of these signals and images with an appropriate granularity is required for an effective monitoring and diagnosis. It renders a big volume of data, and its analysis is not feasible manually. Therefore, automated healthcare systems are in the process of evolution. These systems are mainly based on biomedical signal and image acquisition and sensing, preconditioning, features extraction, and classification stages. The contemporary biomedical signal sensing, preconditioning, features extraction, and intelligent machine and deep learning-based classification algorithms are described. Each chapter starts with the importance, problem statement, and motivation. A self-sufficient description is provided. Therefore, each chapter can be read independently. To the best of the editors' knowledge, this book is a comprehensive compilation on advances in non-invasive biomedical signal sensing and processing with machine and deep learning. We believe that theories, algorithms, realizations, applications, approaches, and challenges which are presented in this book will have their impact and contribution in the design and development of modern and effective healthcare systems.

Artificial Intelligence Applications for Brain-Computer Interfaces Abdulhamit Subasi, Saeed Mian Qaisar, Akash Kumar Bhoi, Parvathaneni Naga Srinivasu, 2025-01-10 Artificial Intelligence Applications for Brain-Computer Interfaces focuses on the advancements, challenges, and prospects of future technologies involving noninvasive brain-computer interfaces (BCIs). It includes the processing and analysis of multimodal signals, integrated computation, acquisition devices, and implantable neuro-techniques. This book not only provides cross-disciplinary research in BCI but also presents divergent applications on telerehabilitation, emotion recognition, neuro-rehabilitation, cognitive workload assessments, and ambient-assisted living solutions. In 15 chapters, this book describes how BCIs connect the brain with external devices like computers and electronic gadgets. It analyzes the neural signals from the brain to obtain insights from the brain patterns using multiple noninvasive wearable sensors. It gives insight into how sensor outcomes are processed through machine-intelligent models to

draw inferences Each chapter starts with the importance problem statement and motivation A description of the proposed methodology is provided and related works are also presented Each chapter can be read independently and therefore the book is a valuable resource for researchers health professionals postgraduate students postdoc researchers and academicians in the fields of BCI prosthesis computer vision and mental state estimation and all those who wish to broaden their knowledge in the allied field Focuses on the advancements challenges and prospects for future technologies over noninvasive brain computer interfaces BCIs including the processing and analysis of multimodal signals integrated calculation acquisition devices and implantable technologies Presents theories algorithms realizations applications approaches and challenges that will have their impact and contribution in the design and development of modern and effective BCIs Assists in understanding the predominance of BCI technology in various applications Systems Design for Remote Healthcare Koushik Maharatna,Silvio Bonfiglio,2013-11-13 This book provides a multidisciplinary overview of the design and implementation of systems for remote patient monitoring and healthcare Readers are guided step by step through the components of such a system and shown how they could be integrated in a coherent framework for deployment in practice The authors explain planning from subsystem design to complete integration and deployment given particular application constraints Readers will benefit from descriptions of the clinical requirements underpinning the entire application scenario physiological parameter sensing techniques information processing approaches and overall application dependent system integration Each chapter ends with a discussion of practical design challenges and two case studies are included to provide practical examples and design methods for two remote healthcare systems with different needs
